

# Top 10 reasons to buy Admin By Request

Admin By Request EPM streamlines endpoint privilege elevation, enhances both security AND productivity, and ensures compliance with ease. But what functionality & attributes makes Admin By Request EPM better than any other products on the market?

To help answer this question we've put together our own 'Top 10' reasons why we think the only choice for your next EPM is Admin By Request Endpoint Privilege Manager (EPM).

**FREE  
PLAN**

## FREE PLAN

You don't have to buy Admin By Request to see if it works for you. Our Free Plan includes full paid-plan functionality, never expires, and covers up to 25 workstations, 10 servers, and 25 SRA devices. When you're ready, upgrading is seamless—no re-deployment or re-configuration needed. Try it risk-free!

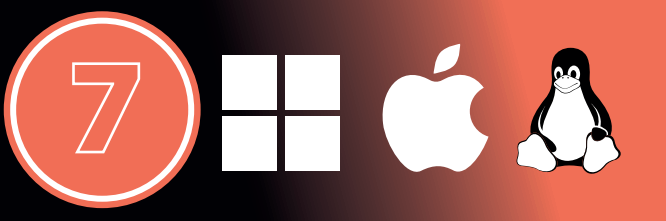

## EASE OF SETUP & DEPLOYMENT

Admin By Request is fast, lightweight, and easy to use—no consultants or complex infrastructure needed. Our 3MB installer deploys quickly on any network, with the smallest attack surface of any competitor. With just two CVEs since 2017 (both over three years ago), it offers an unmatched security record, protecting millions of endpoints worldwide.

## PERFORMANCE

Built for a seamless user experience, with its tiny footprint and minimal file size, it also uses virtually no CPU. In fact, when we tried to graph its CPU usage from our demo system, it was a complete flatline—there was nothing to show! Lightweight, efficient, and hassle-free.

## MULTI PLATFORM

Endpoints spread across multi-platforms can all be managed from one central portal with unified auditing - Windows, macOS (Intel & Apple Silicon), and Linux, no issue. Managing different platforms with separate tools increases cost, complexity, and security risks. We even provide ARM support for Windows, ensuring seamless protection across all your devices.

**OPSWAT.**

## OPSWAT INSIDE

Powerful integrations like ServiceNow, Jira, MS Teams, and Slack all included as standard. A standout feature is our deep integration with OPSWAT MetaDefender, which checks all application elevations in real time against up to 20 AV engines. This ensures only safe, verified applications get approved—giving IT teams and users complete confidence in security.

## 5 A.I & MACHINE LEARNING APPROVAL

Skip the hassle of managing thousands of rules with powerful AI and machine learning approvals. Our system ranks applications and vendors from a database of 13+ million apps, automatically flagging those below your set threshold for review. Over time, machine learning refines approvals—boosting automation, enhancing productivity, and keeping security airtight.

## 4 UNLIMITED GRANULAR POLICIES (SUB SETTINGS)

Flexibility is key, and our unique 'Sub Settings' make policy deployment highly dynamic. Most features can be layered, applying different settings based on group or OU membership. Admins can configure full or partial settings, creating granular, dynamic policies with complete visibility. Best of all, there's no limit to Sub Settings—even on the Free Plan!

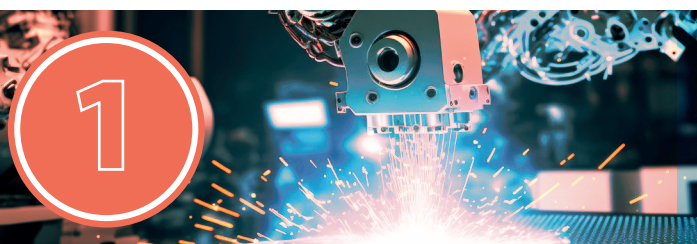

## 3 SIMPLE, TRANSPARENT & COMPETITIVE LICENSING

Simple to use, deploy, and manage—and just as easy to buy! Pricing is highly competitive, with no setup fees and optional professional services. Support is fully included, though you won't need much—our robust, reliable solution 'just works,' saving you time and keeping you focused on what matters.

## 2 'ALL YOU CAN EAT' FEATURES – NO EXTRAS

Pricing shouldn't be a puzzle. Some vendors reel you in with a full feature POC, then hit you with a complex pricing maze, forcing unexpected tough trade-offs. With us, there's just one SKU—no hidden extras, no surprises. You get everything upfront, so when it's time to buy, you know exactly what you're paying for.

## 1 UNRIVALED MANAGEABILITY

The top reason to choose us? Unrivalled manageability. Unlike competitors' cobbled-together solutions, Admin By Request EPM is purpose-built by us, ensuring seamless functionality from day 1 to year 5 and beyond.

With our clean, intuitive portal, configuration is stress-free, even in complex environments. Whether managing 25 or 25,000 users, you'll enjoy precise, predictable outcomes—no matter how demanding the scenario.

## HOW DOES THE COMPETITOR COMPARE?

Feature	Admin By Request	Competitor X
