### How can this help my PCN?

- ✓ Easily see variability between practices
- ✓ Use data to centralise recall of patients leading to efficiency savings
- ✓ Review activity data
- ✓ Identify frequent flier patients to plan interventions

- Easily see patients that need recalling for QOF
- Identify those who are overdue blood monitoring for their medication
- Find patients who are not coded properly to improve your practice's prevalence and drive up practice income
- Monitor team members performance on QOF markers.
- Pull out high risk patients and see who needs to be reviewed by your pharmacist or social prescriber
- PCN DES IIF monitoring.

- ✓ The data within the dashboards is updated on a monthly basis. In order to offer an up to date overview of the different channels within your practice to help manage delivery of care.

Thanks a bunch for the tools. They've had more than the desired effect, especially the Palliative Care protocols and the QRISK recalculations.

Our Statin offering has significantly increased and this is because of that protocol.
