

A simple and
efficient **point**
of care solution

WHAT IT DOES

A cloud-based operating system that helps vaccination efforts.

With our cloud-based solution, patient check-in to vaccine delivery locations is effortless. Administration tasks, like taking notes and sending data back to an individual's GP so that staff can assess at-risk patients, is more straightforward than ever.

It takes less than 60 seconds to ensure that all required information is captured and the seamless integration with NHS Spine services ensures data is shared in near real-time.

WHAT IT DELIVERS

Designed to be used in any care setting on any device, clinicians can:

- 1.** Look-up patient information using the Personal Demographic Service (PDS)
- 2.** Access a patients historic immunisation data via the Immunisation History API
- 3.** Complete a structured clinical assessment
- 4.** Send details of the encounter to the patients GP
- 5.** Record details of the vaccination encounter through our bespoke workflows, as well as allergies & adverse reactions
- 6.** Report on encounters completed
- 7.** Submit claims for fundings to BSA

BENEFITS

Versatile

HelixHub is compatible with any NHS-approved laptop or tablet without any need to install software. Access is controlled via your Smart Card or next generation Cross Platform Keys ensuring smooth but secure login; the Helix Vaccination App HelixHub makes access easy and quick.

Straightforward

In a few clicks, users can identify a patient through look up on the Spine, enter their consent, then store the information about their vaccine event. Seamless integration with the Spine ensures that this data is securely shared with other providers involved in care for that patient.

Protected

We always use the latest cyber protection to keep out hackers. HelixHub uses state-of-the-art encryption and data protection strategies to ensure that both you and your patient's data is protected at all times. HelixHub is guarded for both patient and clinic.

Frees up time

Saving time is everything and HelixHub achieves just that by allowing health staff to record entries efficiently so that staff aren't overburdened with administration and can therefore spend more time with patients.
