

Care Planning

Enhancing Care Delivery Through the Standardisation of Care

In today's dynamic healthcare landscape, the importance of effective care planning cannot be overstated.

Burden, Inefficiencies, and Errors in traditional Care Planning

Care Planning is a process of developing a plan to address a patient's healthcare needs. Care plans describe the professional process of care, including the patient outcomes to be achieved, interventions to help achieve these outcomes, and the education patients need as they prepare for discharge. To ease recovery and manage conditions, care plans should reflect the personalised needs of patients.

However, the current healthcare ecosystem presents NHS trusts with a set of daunting challenges. Clinicians often resort to unvalidated search engines or AI tools for care plans, leading to non-standardised, non-evidence-based approaches. The outcome? A fragmented system where care teams operate independently, resulting in compliance issues, errors, inefficiencies, and additional burdens on an already stretched healthcare workforce.

Introducing Elsevier's Care Planning Solution

Elsevier's Care Planning solution distinguishes itself from traditional methods. We offer a streamlined approach to care planning that ensures all members of a healthcare team are on the same page and working toward the same goal. Our care planning solution helps interdisciplinary healthcare teams create personalised care plans that are tailored to the unique needs of each patient. Our solution delivers customised, standardised, and evidence-based care plans that are updated with the latest evidence clinical best practice guidelines.

Your healthcare organisation is unique, and our solution is tailored with your team and organisation in mind. By adopting Elsevier's Care Planning, you ensure that your care teams work in harmony, following the patient's plan of care that meets their individual needs and preferences. This approach not only enhances compliance but also helps reduce errors, streamlines processes, and alleviates the pressures on your healthcare workforce.

No matter where you are in your interoperability journey, Elsevier is here to help

At Elsevier, our commitment extends beyond care planning. We provide comprehensive services to assist with Electronic Patient Records (EPR) and Elsevier solution integration, ensuring a seamless adoption that empowers your healthcare organization to deliver exceptional patient care efficiently and effectively.

Knowledge Based Clinical Decision Making powered by Elsevier

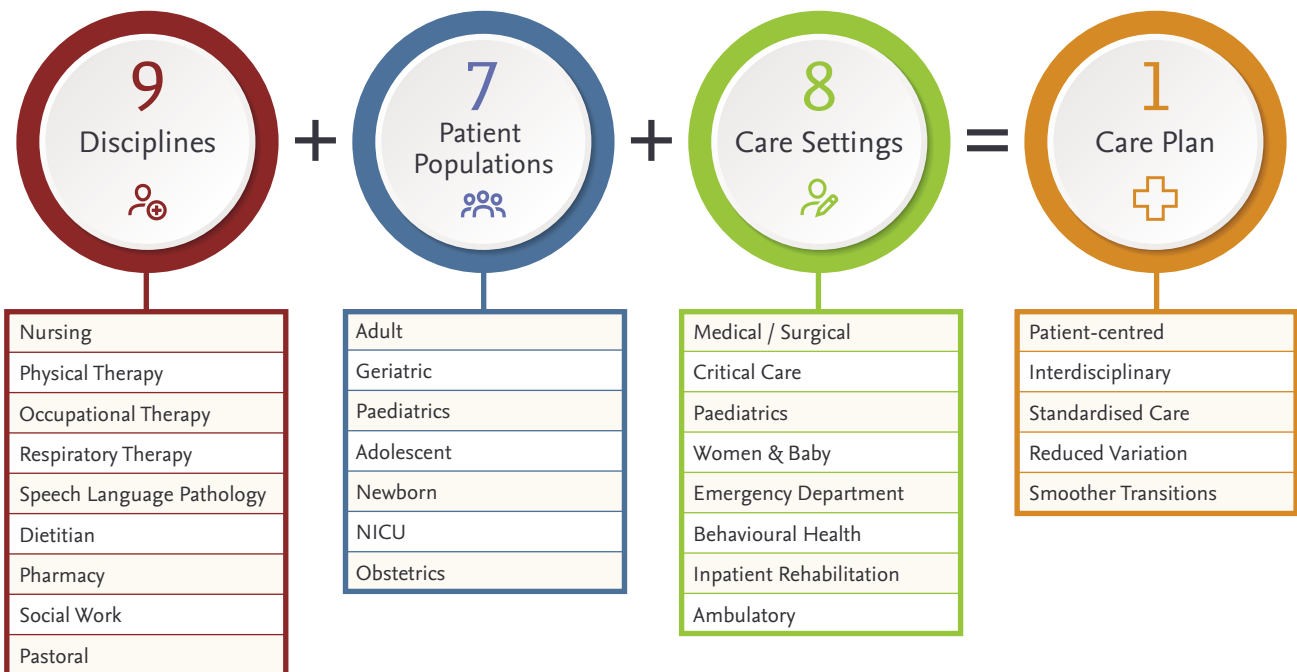

Elsevier's Care Planning solution is unique in bringing evidence-based care planning content directly to the point-of-care, delivered through your EPR. Our Care Plans can be integrated into a native EPR, which saves organisations time and resources on developing, updating, and configuring EPR content.

Elsevier care plans deliver:

- Current, comprehensive evidence-based content regularly updated and maintained
- Hundreds of standardised care plan guidelines that are customisable to meet the patients needs
- Structured and normalised care plan content that facilitates interoperability, data collection and research
- Meet compliance goals with the latest regulatory considerations and current clinical guidelines
- Efficiency and time savings by streamlining the care planning process, giving clinicians more time with patients
- Exceptional coordination and communication through one longitudinal care plan, across the continuum

Designed to address the challenges you face

Our solution integrates the patient's story with over 300 evidence-based clinical practice guidelines into ONE patient-centred plan of care from which the interdisciplinary care team can practice.
