North Central London Integrated Care System

# Keynote Presentation

**Lisa Yates**  
Digital Strategy Lead  
Nottingham University Hospitals

# How the NHS Estate Can Be Modernised to Support Evolving Models of Care – Lisa Yates

There is very little opportunity for patients to use technology to communicate with family etc if not got own tech. Eg emails, virtual video

Noise at night can impact on the patient's sleep, especially with a mobile patient who doesn't sleep.

Many rooms are isolated, so if you were in a room on your own with a patients and things started to go wrong, I wouldn't be confident that I could get help in a timely way

It's frustrating when you have a busy workload and want to spend the time with patients or other more important tasks.

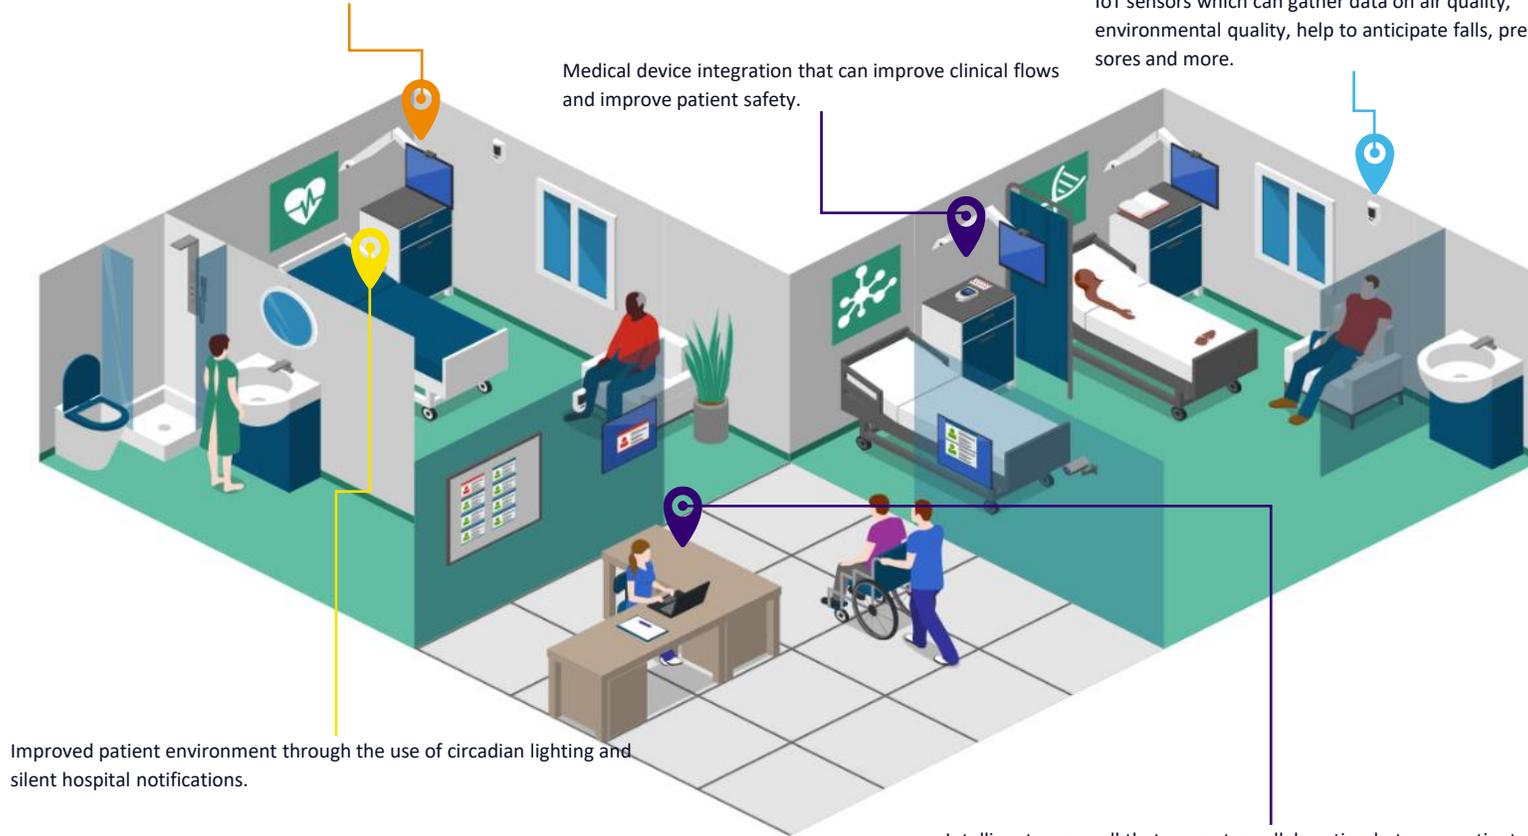

Nurse call bells drive me potty. Raises patient agitation. Also, interferes when I'm assessing patient concentration

# 01 | Technology Overview: The Patient Room

Intelligent bedside terminal – as well as information and entertainment, intelligent terminals promote patient independence through integration with environmental controls and increased patient activation with the presentation of digital therapeutic applications.

## User Stories

- Be able to access my personal data, care plan and schedule
- Be notified of reminders for my schedule
- Get help quickly when I need it
- Feel empowered through the use of digital tools
- Be able to manage my local environmental controls
- Have access to a variety of entertainment and information
- Be able to remotely engage with my support network
- Be able to access information about other support networks such as charities
- Be notified of the benefits I may be entitled to
- Have access to free Wi-Fi throughout the building
- Have access to virtual care in the community and from my own home when appropriate
- Be independently mobile throughout the facility
- Be able to access digital tools (nurse call, environmental controls and entertainment) using optical or audio inputs, as required

Improved patient environment through the use of circadian lighting and silent hospital notifications.

Medical device integration that can improve clinical flows and improve patient safety.

IoT sensors which can gather data on air quality, environmental quality, help to anticipate falls, pressure sores and more.

Intelligent nurse call that promotes collaboration between patients and staff, intelligent plug and play input devices for patients with complex needs i.e. blow tube input, ocular tracing and more.

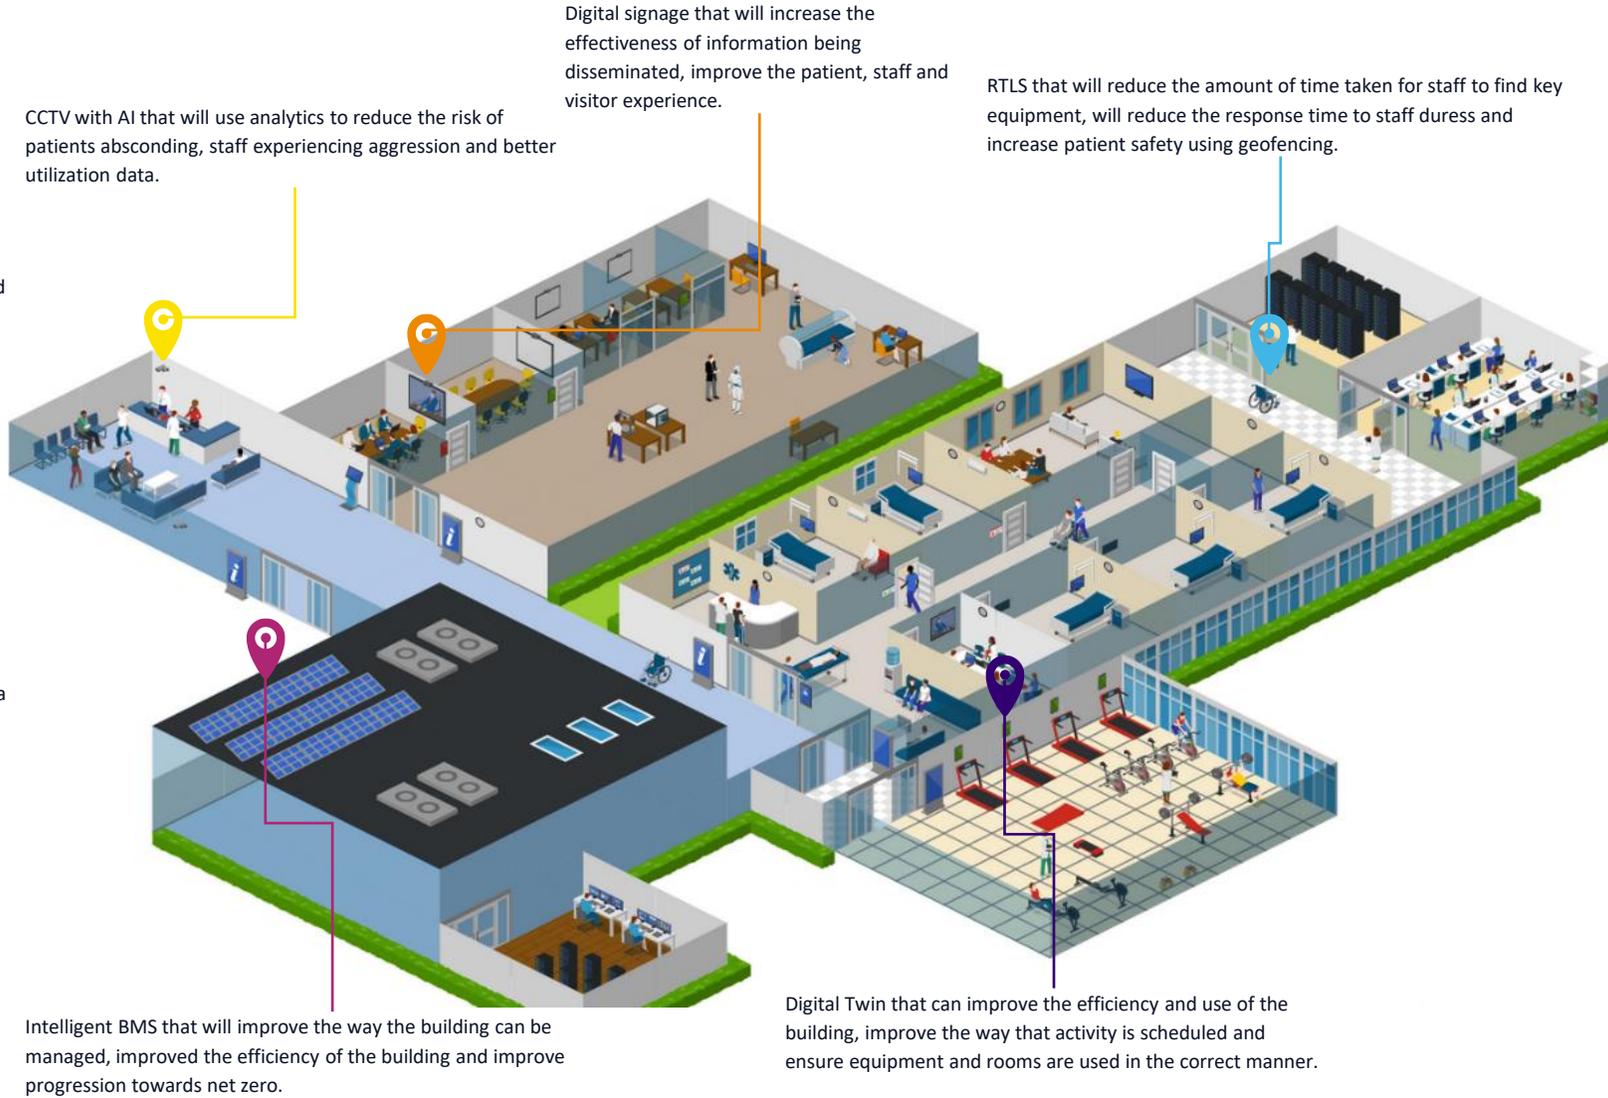

## Features

- Intelligent bedside terminal
  - Entertainment
  - Patient and hospital information
  - Digital therapeutic applications
  - Environmental controls
  - Patient feedback
  - Meal ordering
- IoT sensors
  - Environmental data collection
  - Fall prevention
  - Pressure sore prevention
- Nurse call & Intelligent Bedhead
  - Two way voice communications
  - Medical device integration
  - Intelligent plug and play nurse call controllers (blow tube, ocular tracing)
- Improved patient environment
  - Circadian lighting
  - Silent hospital notifications

# 01 | Technology Overview: : The Intelligent Hospital

## User Stories

- Be easily able to track patients, staff and portable devices
- Be able to remotely contact patients
- Utilise digital tools which automate unskilled manual tasks and free up time to do other things
- Be able to easily access patient information and records from multiple devices
- Be able to identify the status of equipment and who is responsible for it
- Be able to remotely monitor patient status and wellbeing
- Be alerted if a patient falls or needs assistance
- Understand what patients need when they call and be able to prioritise tasks accordingly
- Be able to receive alerts and notifications via mobile device
- Be able to call for help quickly and easily in an emergency
- Utilise digital tools which are intuitive and easy to use
- Utilise digital tools that are robust and reliable
- Utilise digital tools which have safeguards that help reduce errors and increase patient safety

## Features

### CCTV with AI

- Absconding detection
- People counting
- Liquid spill detection
- Aggression detection

### Digital signage

- Video conferencing
- Real time information updates
- Mass notifications
- Room status information
- Visitor check-in

### RTLS

- Asset and equipment tracking
- Digital wayfinding
- Staff duress alarms
- Geofencing

### BMS

- Data collection through sensors
- Predictive maintenance
- Increased building control

### Digital Twin

- Room and equipment booking
- Building utilization data
- Lifecycle management
- Smart scheduling

# Lessons Learnt

**Lack of robust evidence and management information**

**Of the shelf products probably won't fit**

**Lack of clinical staff time & faith**

**Not enough digital resources/skills**

**Lack of funding and conflicts with capex/opex**

**Need to get concepts of the drawing board and into a live environment**

**Organisational silos and traditional structures.**

**Conflicts between contractor and trust goals**

**Technical challenges particularly with legacy estate**

**Lots of red tape**

## Slido

# Accelerating the transition to a zero-emission NHS road fleet

Beatrice Sampson – Energy Saving Trust

Kate Townsend – Berkshire Healthcare NHS Foundation Trust

EstatesVision 2026

24.02.26

# Today's presentation

**Introduction** to Energy Saving Trust and Berkshire Healthcare NHS Foundation Trust

**Fleet advice** overview

- Directly operated fleet
- Business travel

Berkshire Healthcare's case study following the **travel emissions and decarbonisation review** delivered by Energy Saving Trust in 2024

- Travel and transport strategy
- Future plans

**Q&A**

# About us

We're an **independent, mission-led organisation** with over 30 years of trusted expertise in:

- low carbon transport
- energy efficiency
- sustainable energy

Specialists in sector fleet analysis and bespoke consultancy

**300+ organisations** supported with decarbonising their transport so far

**60+ NHS Trusts** and emergency service fleets helped across the UK to date

**20+ years** of working with public sector fleets to transition to zero emission fleet

# Berkshire Healthcare NHS Foundation Trust

Berkshire Healthcare  
NHS Foundation Trust

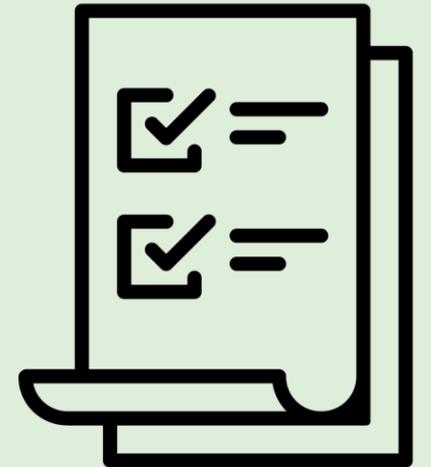

- The Trust is the main provider of mental health and community health services to a population of **around 900,000 people** across Berkshire.
- **Approx. 130 buildings**, with a mixture of owned estate, NHS PS and PFI properties.
- There are **six local unitary authorities** across the Trust patch; West Berkshire, Reading, Wokingham, Windsor and Maidenhead, Slough and Bracknell Forest.
- The Trust employs approximately **6,000 permanent staff** which includes doctors, registered and non-registered nurses, therapists, psychologists and both clinical and non-clinical support staff.
- The majority of our healthcare and therapy services are provided to people within their own homes.

# Fleet advice and consultancy

## How we can help

Whatever stage you have reached:

- All aspects of **fleet** and **business travel** (grey fleet)
- How to **reduce emissions** and transition to **zero-emission vehicles**
- **Approaches** for tackling business travel
- Electric vehicle **charging infrastructure**, electrical capacity requirements, and strategies to increase capacity

# Directly operated fleets

Vehicles **owned and operated** by your Trust – typically pool cars, estates vans, delivery vehicles, buses

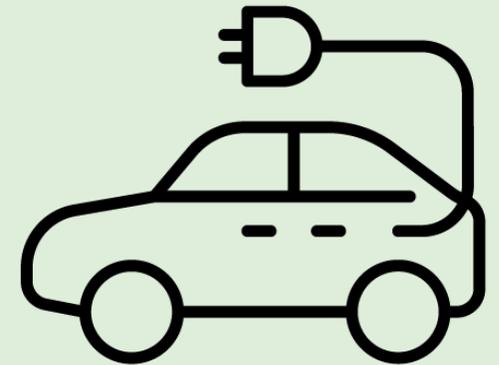

NHS strategy (excluding ambulances):

- 2027 – **new** vehicles zero-emission
- 2035 – **all** vehicles zero-emission

**Battery-electric** generally best zero-emission technology

- Reduce emissions by around **75-80%**, plus
- **Suitable** to most applications

Charging infrastructure – low power (7 kW) AC for charging during **downtime**

# Business travel

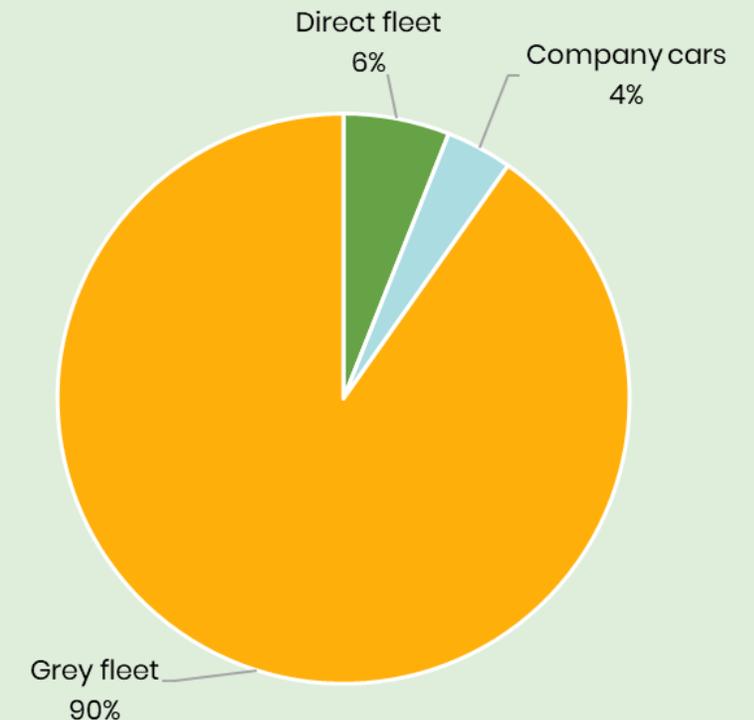

Travel for work in **employee vehicles**:

- Grey fleet (employee own vehicles)
- Company cars (lease, salary sacrifice)
- Majority of employees will claim a small amount of miles in a year, but often **a small number will claim a larger proportion** of miles (over 8,000 miles)

NHS strategy:

- 2033 – emissions reduced by **50%**

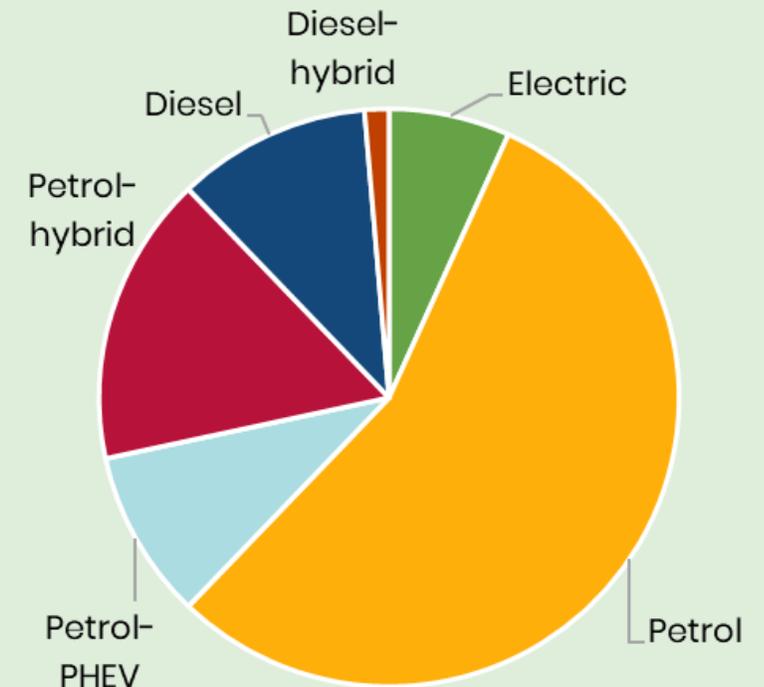

Often **largest** part of NHS Trusts' transport emissions

Example emissions share NHS Trust

# Business travel

- Not easy to tackle and no single solution
- Communication and working **with** employees
- Three target areas:
  - **Reducing mileage** altogether (digital tools and active travel)
  - **Moving mileage** away from single-occupancy vehicles (public and shared transport)
  - **Decarbonising** the vehicles used (battery electric, pool cars, company cars)

Example company cars breakdown by fuel

# Energy Saving Trust Review: Business Mileage

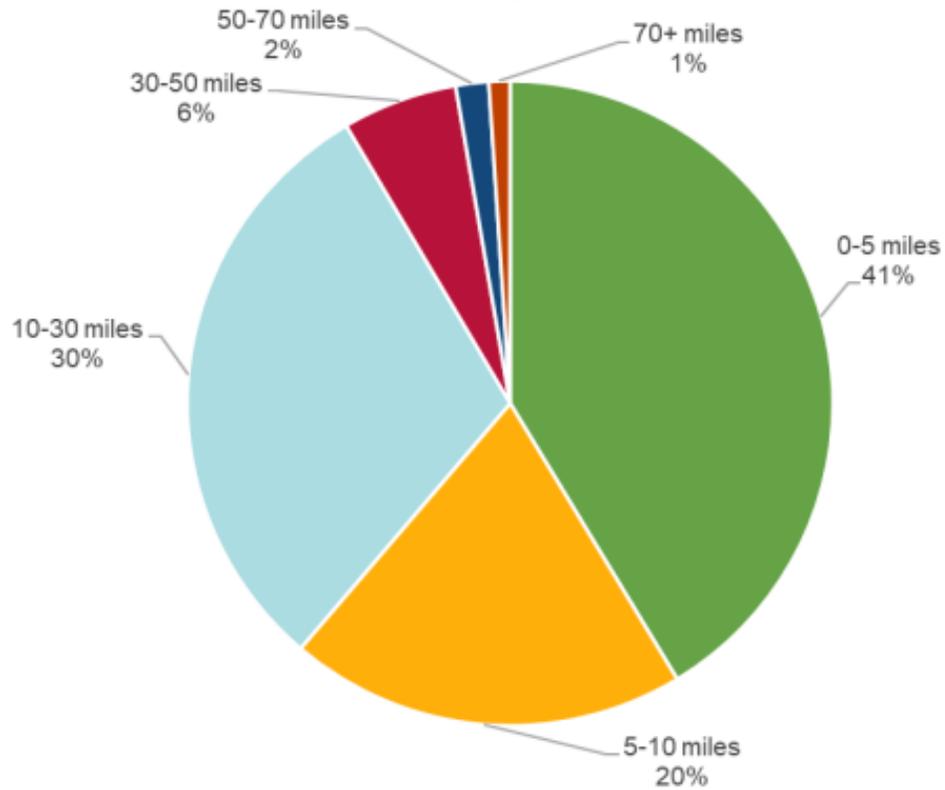

Berkshire Healthcare  
NHS Foundation Trust

Table 4-1: GHG and energy analysis for BHFT employee business mileage, 2022/23

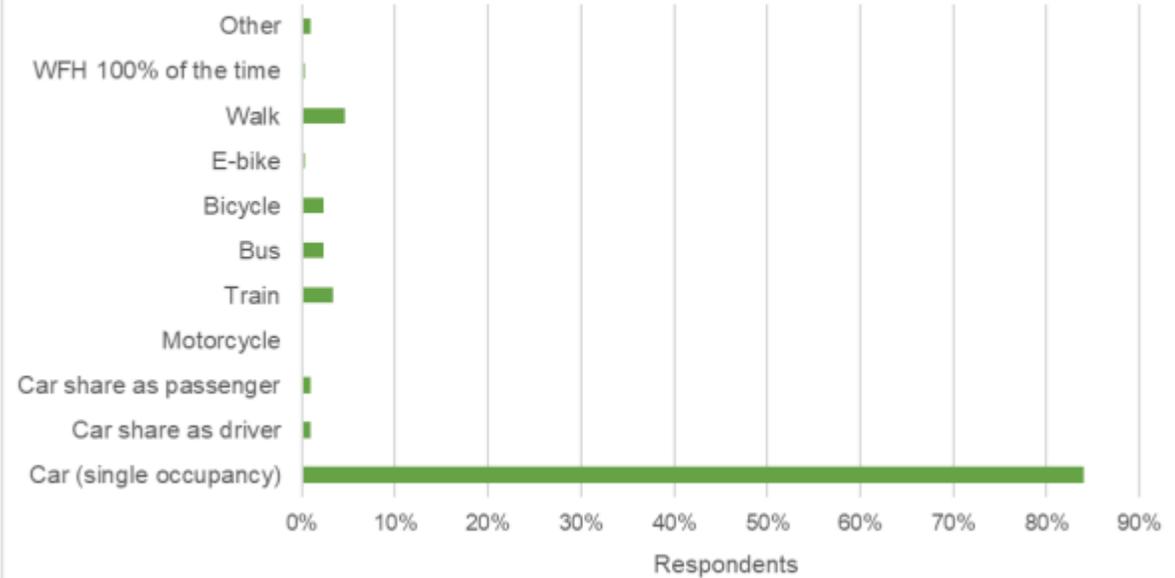

Fleet	Fleet size	Annual mileage	WTW energy (kWh)	WTW GHG (tonnes)	Scope 1 GHG (tonnes)	Scope 2 GHG (tonnes)	Scope 3 GHG (tonnes)
BHFT – pool	13	94,306	116,055	33.95	26.57	0.00	7.38
Company cars	71	101,904	120,340	27.63	20.24	0.00	7.39
Grey fleet	2,162	2,227,019	2,629,920	645.87	0.00	0.00	645.87
Taxi	/	1,696	2,003	0.73	0.60	0.00	0.12
<b>Total grey fleet + company cars</b>	<b>2,233</b>	<b>2,328,923</b>	<b>2,750,260</b>	<b>673.5</b>	<b>20.24</b>	<b>0.00</b>	<b>653.26</b>
<b>Total incl. pool &amp; taxi</b>	<b>2,246</b>	<b>2,424,925</b>	<b>2,868,318</b>	<b>708.18</b>	<b>47.41</b>	<b>0.00</b>	<b>660.77</b>

# Energy Saving Trust Review: Staff Commuting Summary

Roughly how far is your commute to work, in miles, each way?  
(849 responses)

What is your primary mode of transport on your commute to work?  
(776 responses)

# BHFT Travel and Transport Strategy

## Objectives:

Berkshire Healthcare  
NHS Foundation Trust

1. Engage and empower staff to understand, support, and adopt sustainable travel choices
2. Actively support the transition to a low-emission fleet by improving data collection, building confidence in electric vehicles (EVs), and implementing fleet changes
3. Ensure the Trust has the infrastructure, energy capacity, and charging processes in place to enable a full transition to a zero-emission fleet
4. Provide facilities and infrastructure to promote and support active travel
5. Reduce emissions from business travel by minimising unnecessary mileage, shifting to lower-carbon modes, and incentivising cleaner vehicle choices
6. Enable and encourage staff to shift towards lower-carbon commuting by improving access to sustainable travel options and incentives.

# Future Plans:

**Berkshire Healthcare**  
NHS Foundation Trust

- Upgrading EV chargers to cope with increased demand – some funding from DESNZ (£64,000).
- EV Salary Sacrifice from end of this year. Webinars and drop-in sessions being planned (with EST).  
Direct outreach to staff members impacted.
- Staff travel survey coming this year.
- 6 Travel events planned for Spring-time, at 2 largest Trust hospitals and 4 NHS PS hospitals:
  - Advertise staff travel survey and new travel strategy.
  - Letting them know about the changes to salary sacrifice.
  - Collaboration with local councils – advertising their travel/sustainability initiatives, public transport options and safe cycle/walking routes.
  - E-bike suppliers to come onsite.
- Deliver BEV learning and driver training sessions.
- Move other fleet to electric vehicles.

# Summary

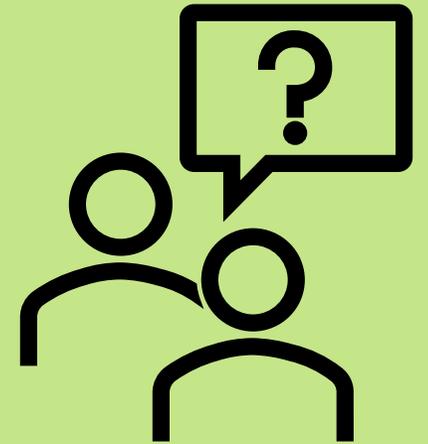

- New NHS fleet vehicles to be zero-emission from **2027**
- Business travel is likely to be the largest area to target
- Requires different actions to address
- Berkshire Healthcare can achieve the NHS zero emission vehicle targets for the direct fleet, and implementing measures to tackle transport emissions

# Case Study

**Simon Hayman**  
Regional Director  
Equans UK & Ireland

**Climate-ready decarbonisation FM solutions**

# Today's session

## Decarbonisation

Where are you on your organisation's sustainability or net zero journey?

## Climate adaptation

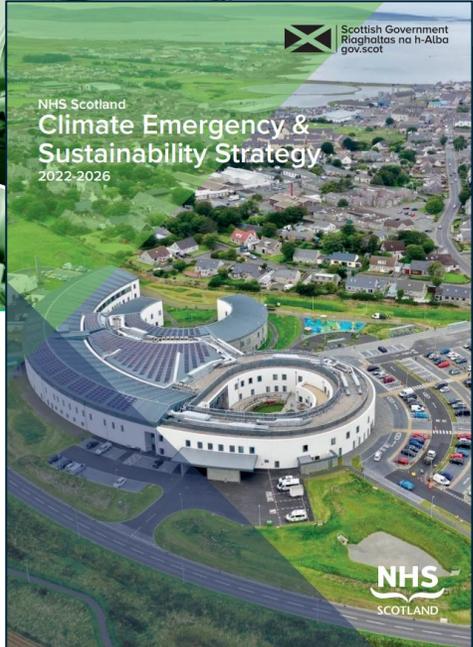

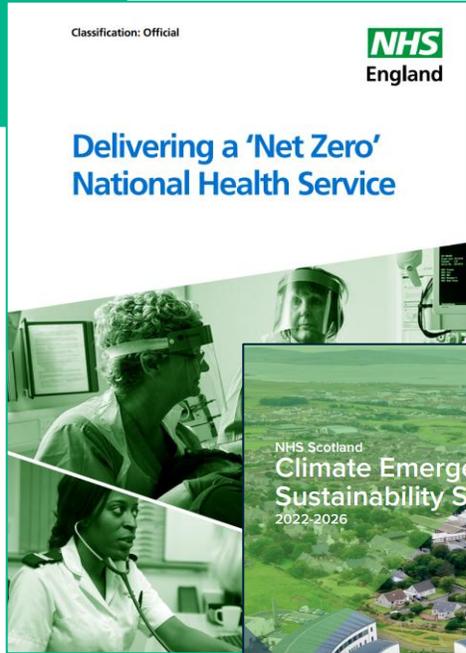

What are the main climate adaptation challenges or pain points you face within your estates?

## Digitalisation

Have you developed an overarching digital vision or strategy for your estate ('Smart Hospital' approach)?

# NHS ENGLAND TARGETS (2025)

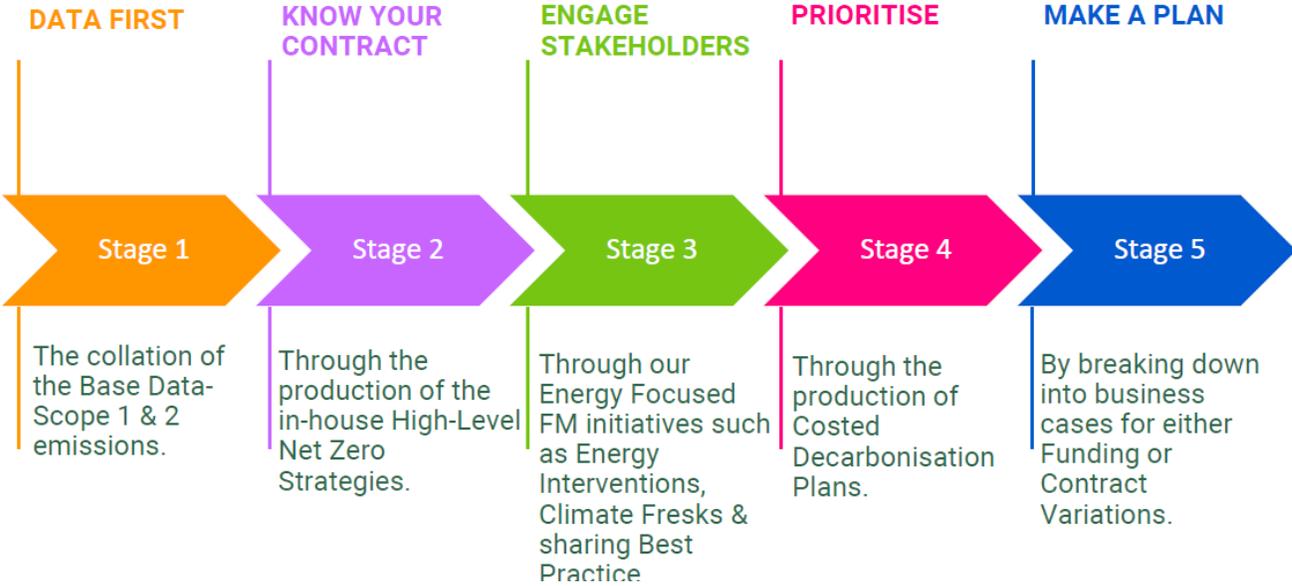

## NHS Carbon Footprint (Scope 1 & 2)

↓ **47%** reduction by 2032

# NHS SCOTLAND TARGETS (2025)

## Reduce greenhouse gas emissions by at least

↓ **75%** reduction by 2030

# Capital funding: key challenges

- **Public Sector Decarbonisation Scheme**  
Withdrawn
- **Low Carbon Skills Fund**  
Withdrawn
- **Grants**  
CDEL
- **NHS Energy Efficiency Fund / GB Energy**
- **NHS Scotland Carbon Reduction Programme**
- **NHS Estates Safety Fund**  
UK-wide
- **Future PFI**  
Decarbonisation

*Capital Departmental Expenditure Limit (CDEL) refers to the maximum amount of capital expenditure that a government department is authorised to incur within a specific period.*

*This limit is set to ensure fiscal responsibility and budget adherence.*

# Sustainability options

**Electrification of heat remains the default** - High/medium temp heat pumps. Shallow geo-thermal can help manage electricity cost through increased efficiency.

**Thermal storage** - allows you to run heat pumps at period of lower electricity tariffs and store heat to manage peaks in demand.

**On-site renewables + Battery Energy Storage Systems (BESS)** - ability to generate, store and dispatch power to grid to generate revenues.

**Low Carbon Heat Networks** - where practical or present, connect to existing networks.

**Hydrogen is not the answer (today) for hospitals.** It remains a nascent technology, and the cost of hydrogen is prohibitive. Storage requirements for larger hospitals could well trigger lower tier COMAH status.

# Case study – solar PV integrated solution

## Integration into a PFI

- Be prepared for DoV
- Business case up to date

## Funding

- GB Energy
- Budget and performance in a fixed timescale
- Supply Chain volatility

## Cambridge University Hospital

- A bi-directional Power Purchase Agreement between Cambridgeshire County Council and Cambridge University Hospital NHS Trust

# Case study: Midland Metropolitan University Hospital

## Seasonal commissioning impact on energy performance

Design	<b>49GJ/100cu.M</b>
Handover	<b>66GJ/100cu.M</b>
Nov 25	<b>59GJ/100Cu.M</b>
Now	<b>53-55GJ/100Cu.M</b>

## Theatre ventilation downturns

- NEEF Funded
- 11 theatres saving £88k/year
- 96 TCO<sub>2e</sub>/year avoided

## Establishment of Energy Working Group

- Current focus is on strengthening action plans, and
- Increasing Trust-wide engagement

# Case study – low carbon networks

## Adaptation in preparation

- Heating temperature
- Electrical infrastructure

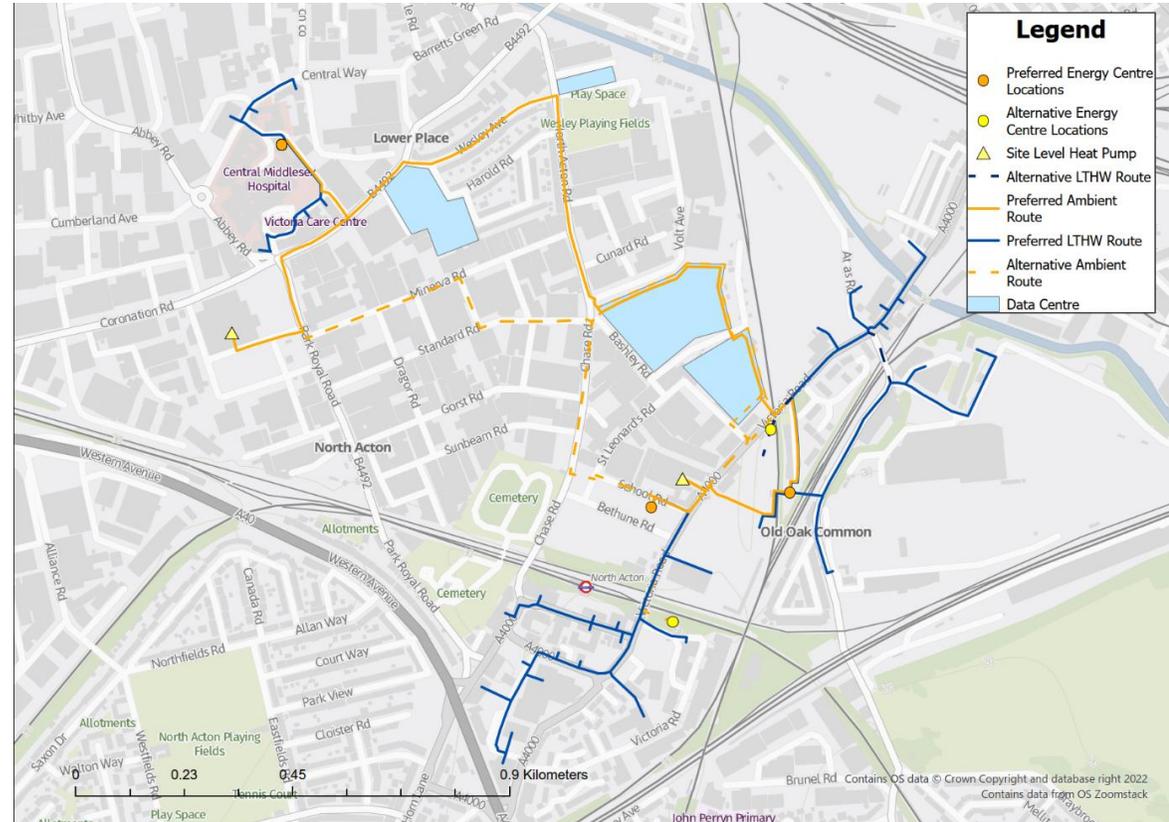

## Capex

- Green Heat Network Fund
- Heat Network Efficiency Scheme
- DESNZ technical support

## Opex

- Reducing load
- Spark Gap

# Climate adaptation in healthcare

## Task force on Climate-related Financial Disclosures (TCFD) Phase 3

- Assessing and mitigating climate risks
- Enhancing resilience
- Ensuring patient comfort and safety during extreme weather events

## NHS Estates Safety Fund

- Climate adaptation improvements such as additional cooling in clinical areas and flood protection to critical infrastructure

## Leeds Teaching Hospitals NHS Trust

- 1<sup>st</sup> NHS trust to be assessed for climate-related damage to buildings
- 8 buildings across two estates assessed including advanced climate modelling, building engineering analysis and bespoke recommendations
- 30+ rooms analysed across the estates with on-site BMS and FM operative support

# Digital transformation

Up to £10 billion in NHS technology and digital transformation by 2028-29. An almost 50% increase from 2025-26

How do we integrate digitalisation into legacy estates?

NHS Estates Digital Maturity Assessment focusing on legacy Estate & Facilities services (not new build).

Currently no pot of money to fund, an equivalent to the Estates Emergency Fund

The screenshot shows the BBH (Building Better Healthcare) website. The header includes the BBH logo and the tagline 'BUILDING BETTER HEALTHCARE'. A navigation bar contains links for HOME, CATEGORIES, BBH AWARDS, COMPANY NEWS, EVENTS, DIRECTORY, and a search icon. On the right, there are links for SUBSCRIBE and LOGIN. The main content area features the article title 'UK spending review: Chancellor's £29bn NHS investment puts digital transformation in the spotlight' by Lina Kurdil, published on 12-Jun-2025. The article is categorized under Design & Build, NHS, Digital, and Technology. A short summary states: 'Rachel Reeves has announced a record £29bn funding boost to get the NHS back on its feet and fit for the future, but health tech leaders warn it must be matched with long-term strategy, integration, and delivery'. An image of the HM Treasury building is shown on the right side of the article.

# Smart hospital - developing an over-arching digital strategy

## KPIs for patient care, experience and overall satisfaction

- Overall patient satisfaction
- Waiting time
- Staff responsiveness

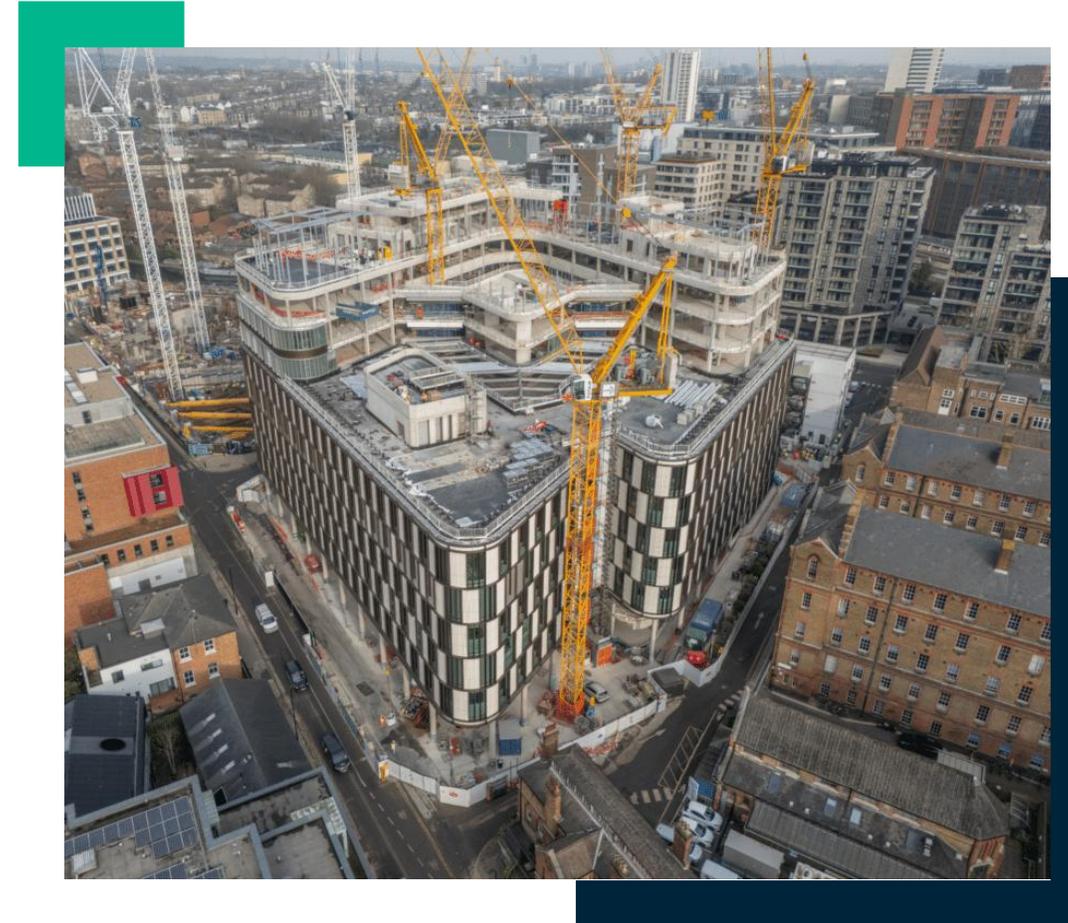

## KPIs medical staff

- Bed turnover rate
- Nursing staff productivity
- Equipment turnover rate

## KPIs for hospital services

- Sustainability efficiency/carbon footprint rate
- Space occupancy rate
- Maintenance budget

# Case study – NHS league tables & digitalisation

Metrics used in developing the league tables include:

Finance such as reducing energy costs

Productivity, room usage, effective flow and discharge of patients

Patient experience

Retention of staff

All of which will be to some extent improved by the way in which the facilities are managed

*The metrics on which the NHS England rankings have been based will be influenced by the quality of the buildings in which they are operating.*

*NHS Scotland has no plans for League tables, at the moment.*

# Case Study

# Case Study

**Stuart McGeary**  
Commercial Bids Manager  
Group Nexus

# The Future of NHS Parking

NHS Estates and Facilities Conference

Presented by: Stuart McGeary, Commercial Bids Manager

Group**Nexus**<sup>®</sup>

# ➤ Three Decades of Insight. One Mission.

## **Our Expertise:**

30+ years supporting NHS Estates.

## **Our Focus:**

Managing the critical first and last 10 minutes of every visit.

## **Our Goal:**

Making the car park the easiest part of the patient and staff experience.

# ➤ What prevents Trusts from getting the service they deserve?

## The Restrictions

- Parking solutions procured as a commodity
- Suppliers often only engaged at point of tender going live
- Specifications with little or no input from industry experts
- Cost focused (dependency on enforcement to fund schemes)

## Who should I take advice from?

- Other Trusts / referrals?
- Equipment manufacturers?
- Consultants?
- Parking operators?

# ➤ The 5 Rules for Improved Procurement

## 1. **Engage parking providers early**

10-12 months prior to the new contract start date is not unreasonable

Early engagement will save you time: tender response times can be reduced, evaluation is easier, and implementation is greatly simplified

## 1. **Ensure all elements are included:** such as maintenance and servicing

No hidden costs. When POs need to be raised for spares and repairs, service and revenue suffers

## 1. **Avoid PCN led schemes**

## 1. **Keep commercial templates simple**

## 1. **Utilise established frameworks such as SBS**

## ➤ The Vision:

A **midwife** is racing to site for an urgent visit, confident that her parking space will be free.

The **ambulance bays** and emergency routes are unobstructed.

A **Blue Badge holder** parks up with no need to display their badge or register on arrival.

A **patient requiring assistance** pulls into a bay, in the knowledge that a porter is already on their way with a wheelchair to assist.

**Staff and visitors** don't need to worry if they've managed their parking correctly or not, fearing the risk of a PCN.

This isn't a distant dream; it's the NHS estate powered by GroupNexus.

# ➤ 1. High priority / reserved bays

## The Problem:

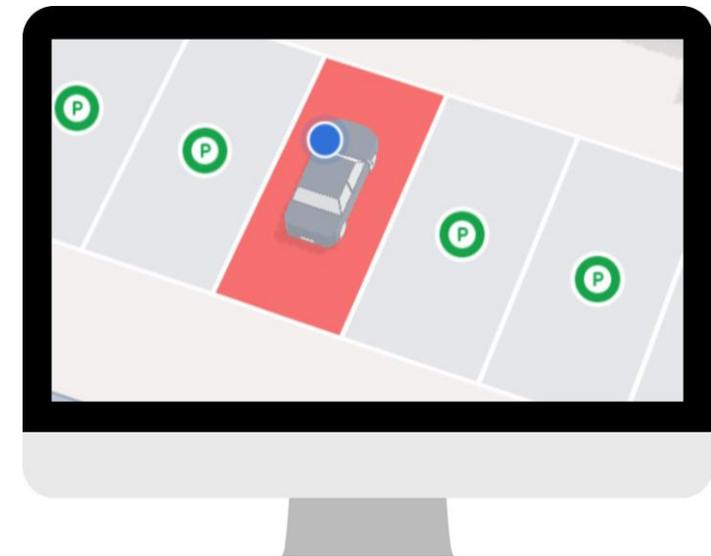

In critical care, every minute counts. Yet, on-call clinicians and midwives are often forced to choose between being late for a shift or parking where they shouldn't because high-priority staff bays are occupied by non-authorized vehicles.

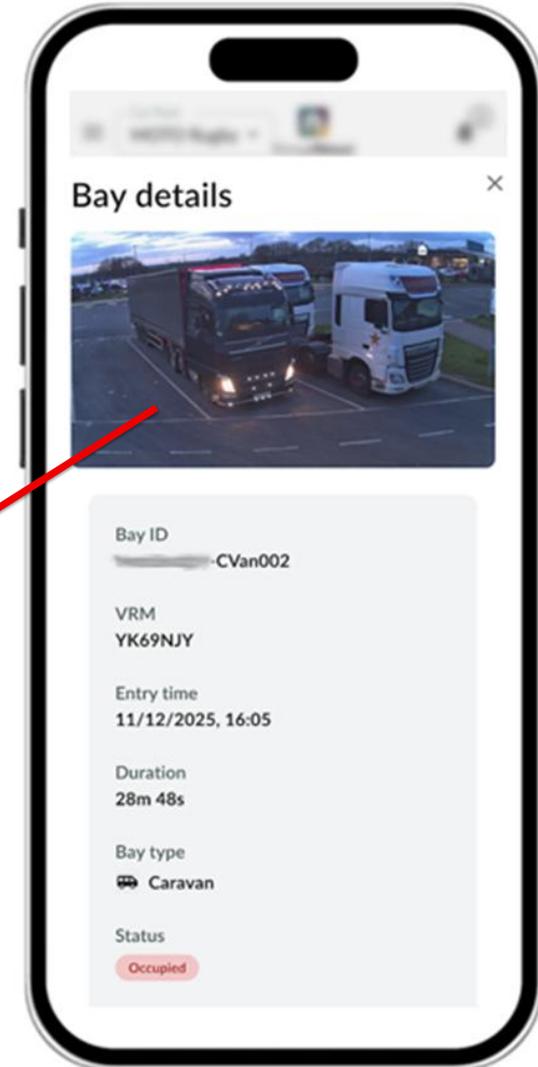

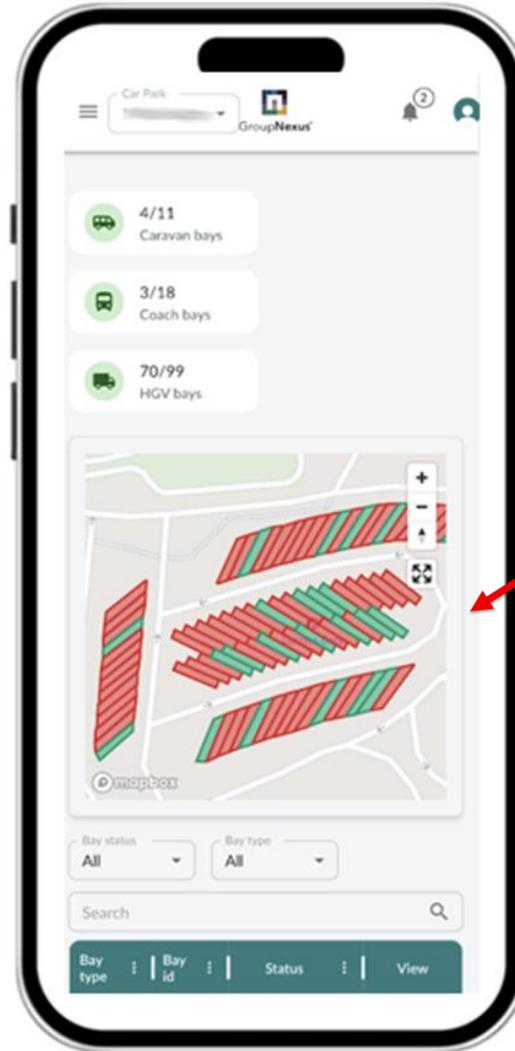

## The Solution: NexusVision.

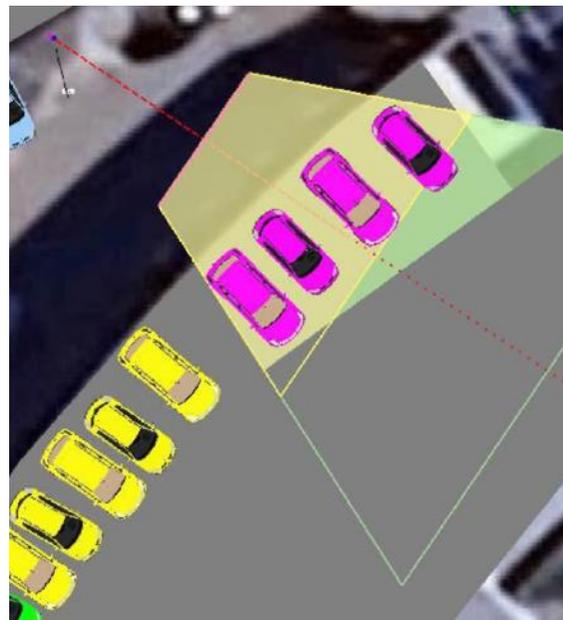

We provide a real-time platform that monitors individual space availability with precision.

By strictly enforcing permissions in these critical zones, we help ensure that reserved spaces remain vacant for the specialists who need them most.

# ➤ Real time monitoring of parking bays

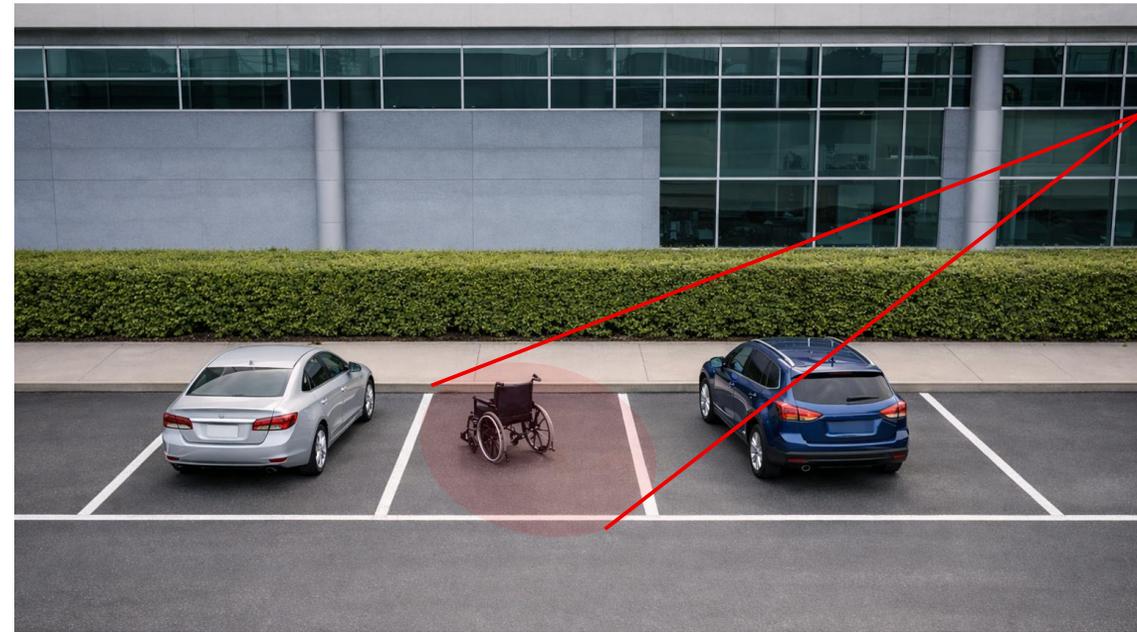

## ➤ 2. Critical Access Blockages

### The Problem:

Minutes matter. Cars blocking ambulance bays or fire routes create genuine risk. Furthermore, abandoned wheelchairs, equipment and other obstacles can create hazards for everyone.

### The Solution: AI-Driven Monitoring.

Using NexusVision, we monitor "Red Zones" in real-time. Our AI doesn't just spot cars; it identifies obstructions like abandoned wheelchairs and triggers an instant notification to porters.

## ➤ 3. Access barriers for BlueBadge holders

**The Problem:** Vulnerable visitors often face "administrative marathons" - long walks to reception or complex kiosks just to register a Blue Badge.

**The Solution:** Our **Blue Badge Pre-Registration System**.

We remove the friction. Visitors register once, and the system remembers them. They drive in, park, and focus on their appointment, while we ensure bays are protected and reserved exclusively for genuine badge holders.

## ➤ 4. Unknown site traffic

### The Problem:

Estates teams often don't know who is on their land - from unauthorised HGVs to caravans or specific "people of interest".

### The Solution: Smart Site Awareness.

Using VOI alerts based on your own custom lists, you get instant visibility. Whether it's managing heavy goods deliveries or identifying unauthorised long-stay vehicles, you regain total control over your site.

## ➤ 5. Drivers requiring assisted access

### The Problem:

Patients with mobility or assisted access requirements often feel most vulnerable the moment they arrive on-site, before they've even entered the building.

### The Solution:

#### **VOI (Vehicle of Interest) Integration.**

Through our VOI product, a patient can pre-register their arrival.

The moment their vehicle enters the site, a notification is sent to the portering team. They are met at the car, supported into the building, and given a seamless transition into clinical care.

## ➤ 6. Planning based on guesswork

### **The Problem:**

Planning maintenance or new staff zones is often based on guesswork. You don't know who's using the car park or which spaces are most "profitable."

### **The Solution: Precision Analytics.**

We provide granular data on dwell times and space utilisation.

We can even track where visitors are traveling from - allowing you to make a data-backed case for services like Park & Ride or more efficient staff zoning.

# ➤ Trusted partners

We work with Clients/ Trusts as partners

Taking a consultative approach

We're happy to provide advice and expertise at any point (no need to wait for an official tender process to engage with us)

We take a patient-first approach & are not PCN-focused

Frameworks & partners:

- Proud to be an SBS approved framework supplier
- Crown Commercial Service approved framework supplier
- Constellia Approved
- Working in partnership with Noviniti

- Ventilation HTM 03
- Water Services HTM 04

SFG20  
HTM-aligned  
schedules  
cover the  
following

---

What is an SFG20 Schedule?

The screenshot shows a software interface for a maintenance schedule. The main title is "Fire Alarm - Voice Alarm Systems (VAS) #HTM 05-08". Below it, there is a breadcrumb trail: "Schedule Library > Specialist Sets > HTM Aligned > Fire HTM 05 > Fire Alarm - Voice Alarm Systems (VAS)".

Annotations in orange boxes point to various parts of the interface:

- Asset Type** points to the main title.
- Code** points to the code "#HTM 05-08".
- Task** points to the task name "8. Inspection and servicing - 6 monthly".
- Frequency** points to the frequency "Every 6M".
- Timing** points to the timing "11m".
- Competency** points to the competency "SP".
- Actions** points to the list of 13 numbered tasks.
- Compliance** points to the list of standards on the right side of the interface.

The task list includes:

- 1) The VAS logbook should be checked to ensure that previous faults received the relevant attention.
- 2) Carry out a visual inspection of the loudspeakers to check if structural or occupancy changes have affected their performance.
- 3) The checks should include:
  - 3.1) Changes to existing structures that may affect the intelligibility or audibility.
  - 3.2) Erection of new structures that may affect the intelligibility or audibility.
  - 3.3) Changes to the use or occupancy that may increase ambient noise.
  - 3.4) Changes to the building that may require additional loudspeakers or VAS equipment.
- 4) Check for clarity or audibility issues that may relate to VAS failures, loudspeaker failures, the loss of high frequency drivers, location or obstruction issues.
- 5) If applicable, check the electronic fault log for any announced faults that may have cleared.
- 6) Visually inspect emergency microphones for damage and check that an intelligible broadcast is received in the nominated areas.
- 7) Verify that the broadcast priority structure is appropriate.
- 8) At least one automatic fire alarm input should be tested to ensure that the correct messages are broadcast to the correct zones, and there are no intelligibility or audibility issues.
- 9) Isolate the primary power supply and check that the system operates on the standby power supply under full alarm load.
- 10) Isolate the standby power supply and check that the system operates on the primary power supply under full alarm load.
- 11) Check the ambient temperature around the batteries.
- 12) Check the batteries and connectors for faults and failures.
- 13) Check the battery installation date against the manufacturer's recommended service life.

The compliance list on the right includes:

- BS 5839-1:2017 Fire detection and fire alarm systems for buildings - Code of practice for design, installation, commissioning and maintenance of systems in non-domestic premises (BSI)
- BS 5839-8:2023 Fire detection and fire alarm systems for buildings - Design, installation, commissioning and maintenance of voice alarm systems. Code of practice
- BS 7671:2018+A2:2022 Requirements for Electrical Installations. IET Wiring Regulations (BSI)
- BS 7671:2018/A3:2024 Requirements for Electrical Installations. IET Wiring Regulations (BSI)
- BS 9999:2017 Fire safety in the design, management and use of buildings. Code of practice (BSI)
- Corrigendum to BS 7671:2018+A2:2022 Requirements for Electrical Installations. IET Wiring Regulations (BSI)
- Electricity At Work Regulations (Northern Ireland) 1991

# Challenges in the NHS

The growing  
£15.9bn  
maintenance  
backlog

Lost clinical time  
due to daily  
infrastructure  
incidents

Recruitment  
freezes

Increasing  
board and  
CQC scrutiny

Cost to remove the backlog **£15.9bn**

---

Yearly NHS Estate costs **£14bn**

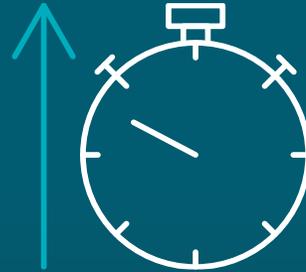

# The impact of the backlog

Increase in  
fines\*

Legal  
sanctions

Increased  
downtime

Budget wastage  
(delaying maintenance  
can often cost 1.5x  
more)

# The problem with delayed maintenance

Deferring backlog maintenance can multiply costs by over 1.5 times over a 2-4-year period\*

\*Maintaining Public Service Facilities Report, National Audit Office 2025

How can you justify securing  
additional maintenance budget?

Build out an ironclad business case  
that key stakeholders **can't turn down**

Nobody *wants* to  
build a business case

Using SFG20, we were able to forecast actual cost requirements and **secure an additional £1 million of maintenance revenue for the future year.**

David Hemming, NHS Service Delivery Lead

# Step 1: Determine compliance costs

## Fire Doors

SFG20/Fire Protection Systems

The schedule covers the maintenance of fire doors, including hardwood fire-rated doors, door hinges, composite doorsets, emergency door release break glass units, an...

### Statutory required tasks

Complete these tasks to ensure legal compliance. Mitigate risk, ensure safety and avoid penalties.

5

[View tasks](#)

### Industry best practice tasks

Keep operations running smoothly, minimise costly downtime, and optimise asset performance.

## Step 2: Apply a risk-based approach for non-statutory tasks

---

		Probability of failure		
		1	2	3
Impact of failure	1	Low	Low	Medium
	2	Low	Medium	High
	3	Medium	High	High

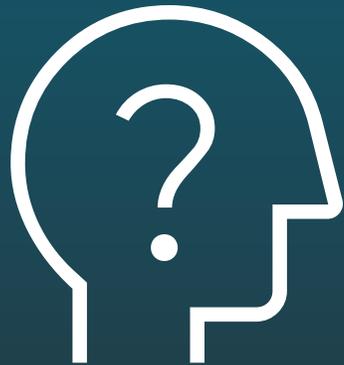

# Step 3: Step into the shoes of your stakeholders

# Stakeholder requirements:

1. Reducing risks and achieving compliance
2. Saving money
3. Operational efficiency
4. Supporting the wider NHS strategy

# Step 4: Write your business case

What are you asking?

Why do you need it?

Why should they care?

# Step 5: Present your business case

Clearly articulate:

- What you are asking for (**more budget**),
- Why you need it (**compliance**)
- How much funding you need for compliance

# The reality of non-compliance

Fines in the millions

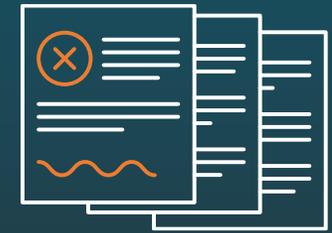

Reputational damage

Prison time

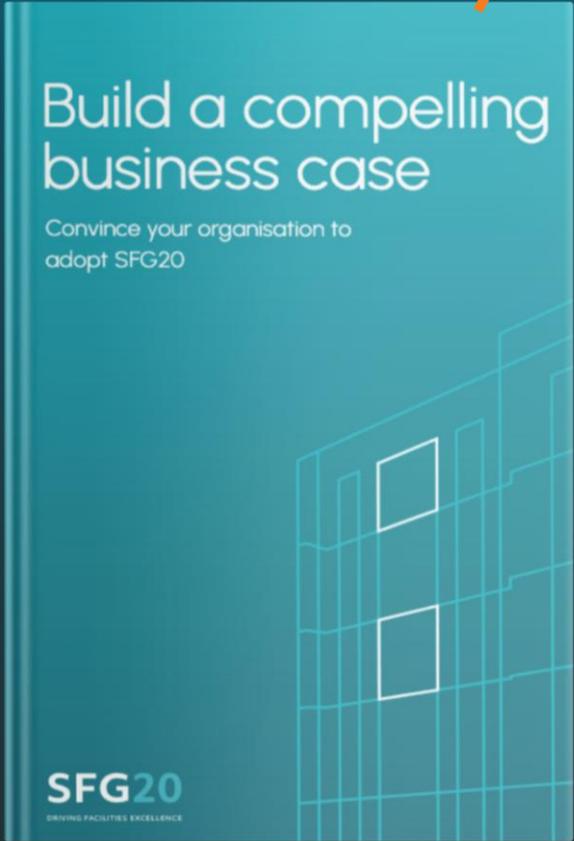

Government intervention

Forced resignations

# Introduction

*“More than just an electrical wholesaler, YESSS Electrical delivers a wide range of services and expertise”*

# Introduction

*These services include specialist divisions providing consultation and solution delivery*

## Facilities Management Solutions

YESSS, we're more than just a supplier! We have Specialist Divisions within YESSS, each with a team of experts in their field that can provide free of charge consultations, design & technical support in the following areas - Renewables, Industrial, Security & Lighting.

Listed to the right are just some of the Supplies, Services & Solutions that we can provide, offering facility management providers the opportunity to deliver more added value, efficiency & savings to their clients, all via a single Preferred Supplier - YESSS!

**SERIOUSLY SIMPLE HIRE? YESSS!**  
YESSS Industrial can get you whatever you need, wherever you need it in the UK.

# Introduction

## The core challenge: fragmented asset visibility

Across the NHS, most trusts hold a lot of asset data — but very little **asset intelligence**.

Information is spread across:

- CAFM systems
- Spreadsheets
- Compliance tools
- Local knowledge

Across the system, estates teams are being asked to:

- Enable diagnostic expansion
- Support digital transformation
- Improve resilience
- Deliver net zero ambitions

And increasingly, to do all of that **with limited visibility of the assets and stock they rely on every day**.

# The challenge: assets and stock managed in isolation

Traditionally, assets and stock are managed as separate problems.

Assets are tracked in CAFM systems.

Stock — spare parts, consumables, components — often sits in:

- Storerooms
- Cupboards
- Vans
- Or external supplier contracts

## **The reality is:**

- Estates teams don't always know what stock they hold
- Critical spares aren't always available when assets fail
- Overstocking ties up capital and creates waste
- Understocking causes downtime and delays to diagnostics

Yet many trusts still rely on manual stock tracking or disconnected systems.

# Smart Asset Solutions: connecting assets and stock

Smart Asset Solutions brings **assets and stock into a single, intelligent view** instead of managing them in isolation.

- Assets to their required spare parts
- Maintenance schedules to stock availability

This allows estates teams to:

- Know which spares are required for critical diagnostic equipment
- Ensure the right stock is available, in the right place, at the right time
- Reduce unplanned downtime caused by missing components

This shifts estates teams from **reacting to failures** to **planning with confidence**.

# Reducing waste and improving value

Smart Asset Solutions supports:

- Better visibility of stock levels across sites
- Reduction in duplicate or expired stock
- Smarter reordering based on actual asset needs

That means:

- Less capital tied up in unused stock
- Fewer emergency orders at premium cost
- Better use of existing inventory

From a sustainability perspective:

- Reduced over-ordering lowers embodied carbon
- Better planning reduces transport emissions
- Stock is used before expiry rather than written off

# Compliance and assurance

For regulated assets and infrastructure, estates teams need to demonstrate:

- Correct parts are used
- Maintenance is carried out to specification
- Records are complete and auditable

By linking stock usage directly to asset maintenance records, Smart Asset Solutions:

- Improves traceability
- Reduces compliance risk
- Simplifies audits

Again, this reduces admin burden and **improves assurance**.

# Smart Asset Solutions Our Services

## Unified Asset & Maintenance Management Platform

### A Smarter Approach to Planned Preventative Maintenance Across Multiple Sites

Managing critical assets across multiple sites is complex. Smart Asset Solutions simplifies Planned Preventative Maintenance by combining intelligent scheduling, digital inspections and performance insight into a single, connected solution.

Our PPM service is designed to move organisations from reactive maintenance to proactive asset care, reducing risk, improving compliance and supporting long-term operational resilience.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

## Asset Passport

Structured Asset Compliance. Full Operational Control.

### Managing asset documentation and compliance across sites doesn't need to be complex

Smart Asset Solutions Asset Passport extends your asset management by giving every asset a secure digital record. This compliance, documentation and incident data are always accurate, accessible and controlled.

Designed for many business types including construction, facilities management and manufacturing environments.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

## Health & Safety Inspections

Managing workplace safety and compliance across multiple sites requires a systematic, data-driven approach. Smart Asset Solutions helps you protect your people, meet regulatory obligations and proactively manage health & safety risks.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

## Smarter Stock. Stronger Business.

### When every tool, component, and asset matters, Smart Asset Solutions delivers confidence and control

Take control of your materials with real-time visibility, automated replenishment and a simple monthly subscription.

A complete fully scalable stock management system that saves time, reduces waste and ensures you never run out of the items that keep your business moving.

Our unique multi-supplier functionality ensures you have unrestricted access to the resources you need.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

Four core services, one single intelligent view

# Smart Asset Solutions

## Our Services

Smart Asset Solutions is a single, integrated platform, designed specifically for complex healthcare estates.

It doesn't ask trusts to rip and replace existing systems. Instead, it brings together asset, maintenance, stock, and performance data into a structured, usable view — turning information into insight.

The platform is modular and scalable, allowing trusts to start small and grow over time, focusing on the areas that deliver the most immediate value.

**At the heart of the platform are four core services, each solving a real estates challenge.**

# Our Services – Asset Passport

The first core service is Asset Passport

Asset Intelligence & Visibility

This provides:

- A single, trusted view of all estate assets
- Visibility of condition, age, criticality, and lifecycle
- Consistent, reliable data across estates, infrastructure, and diagnostics

For estates leaders, this means:

- Clearer prioritisation
- Better capital planning
- Confidence that decisions are based on fact, not assumption

**This is the foundation on which everything else sits.**

 **SMART ASSET SOLUTIONS**  
powered by **TicTAP**

**Asset Passport**  
Structured Asset Compliance. Full Operational Control.

 **APP FREE TECHNOLOGY**

**Managing asset documentation and compliance across sites doesn't need to be complex**

Designed for many business types including construction, facilities management and manufacturing environments.

 **YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

# Our Services – Health & Safety Inspections

The second core service focuses on Health and compliance.

It supports:

- Condition-based and risk-based maintenance
- Automated compliance tracking
- Audit-ready records and reporting

This reduces:

- Manual admin
- Compliance risk
- Time spent preparing for inspections

And it allows estates teams to spend more time improving asset performance, rather than proving compliance.

**SMART ASSET SOLUTIONS**  
powered by **TicTAP**

**Health & Safety Inspections**

**APP FREE TECHNOLOGY**

Managing workplace safety and compliance across multiple sites requires a systematic, data-driven approach. Smart Asset Solutions helps you protect your people, meet regulatory obligations and proactively manage health & safety risks.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

# Our Services – Stock Management

The platform links:

- Assets to the parts that support them
- Gives live insights into stock visibility
- Who, What, When, Where and Why

This allows estates teams to:

- Ensure critical spares are available when needed
- Reduce delays caused by missing components
- Gain a complete overview of resources used for works carried out

Save Time - Reduce Waste - Increase Productivity - Improve Cost Control

Effective stock management delivers more than performance; it ensures **accountability**

**SMART ASSET  
SOLUTIONS**

powered by **TicTAP**

**Smarter Stock. Stronger Business.**

Supported by your local YESSS Electrical branch

# Our Services – PPM's

Using asset and stock data, the platform supports:

- Lifecycle and replacement planning
- Capital prioritisation
- Sustainability and net-zero reporting

This enables estates teams to:

- Extend asset life where appropriate
- Reduce energy waste
- Avoid premature replacement and embodied carbon

Sustainability becomes a by-product of better asset management, not an additional burden.

**SMART ASSET SOLUTIONS**  
powered by **TicTAR**

**Unified Asset & Maintenance Management Platform**

**APP FREE TECHNOLOGY**

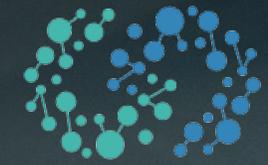

**A Smarter Approach to Planned Preventative Maintenance Across Multiple Sites**

Managing critical assets across multiple sites is complex. Smart Asset Solutions simplifies Planned Preventative Maintenance by combining intelligent scheduling, digital inspections and performance insight into a single, connected solution.

Our PPM service is designed to move organisations from reactive maintenance to proactive asset care, reducing risk, improving compliance and supporting long-term operational resilience.

**YESSS ELECTRICAL** Supported by your local YESSS Electrical branch

# Our Services

Together, they provide:

- Asset intelligence as the foundation
- Maintenance and compliance as assurance
- Stock management as resilience
- Performance insight as strategic control

This integrated approach is what allows estates teams to:

- Support diagnostics more reliably
- Reduce cost and waste
- Make confident, evidence-based decisions

**Unified Asset & Maintenance  
Management Platform**

Smart Asset Solutions powers modern operations with a flexible, modular platform. It is designed to manage assets, inventory, compliance and maintenance at scale and with confidence.

# Designed to empower users

Easy for users, effective for projects: A simple approach to adoption

# Our Services – Smart Storage Solutions

Smart Storage Solutions is an access controlled unmanned storeroom

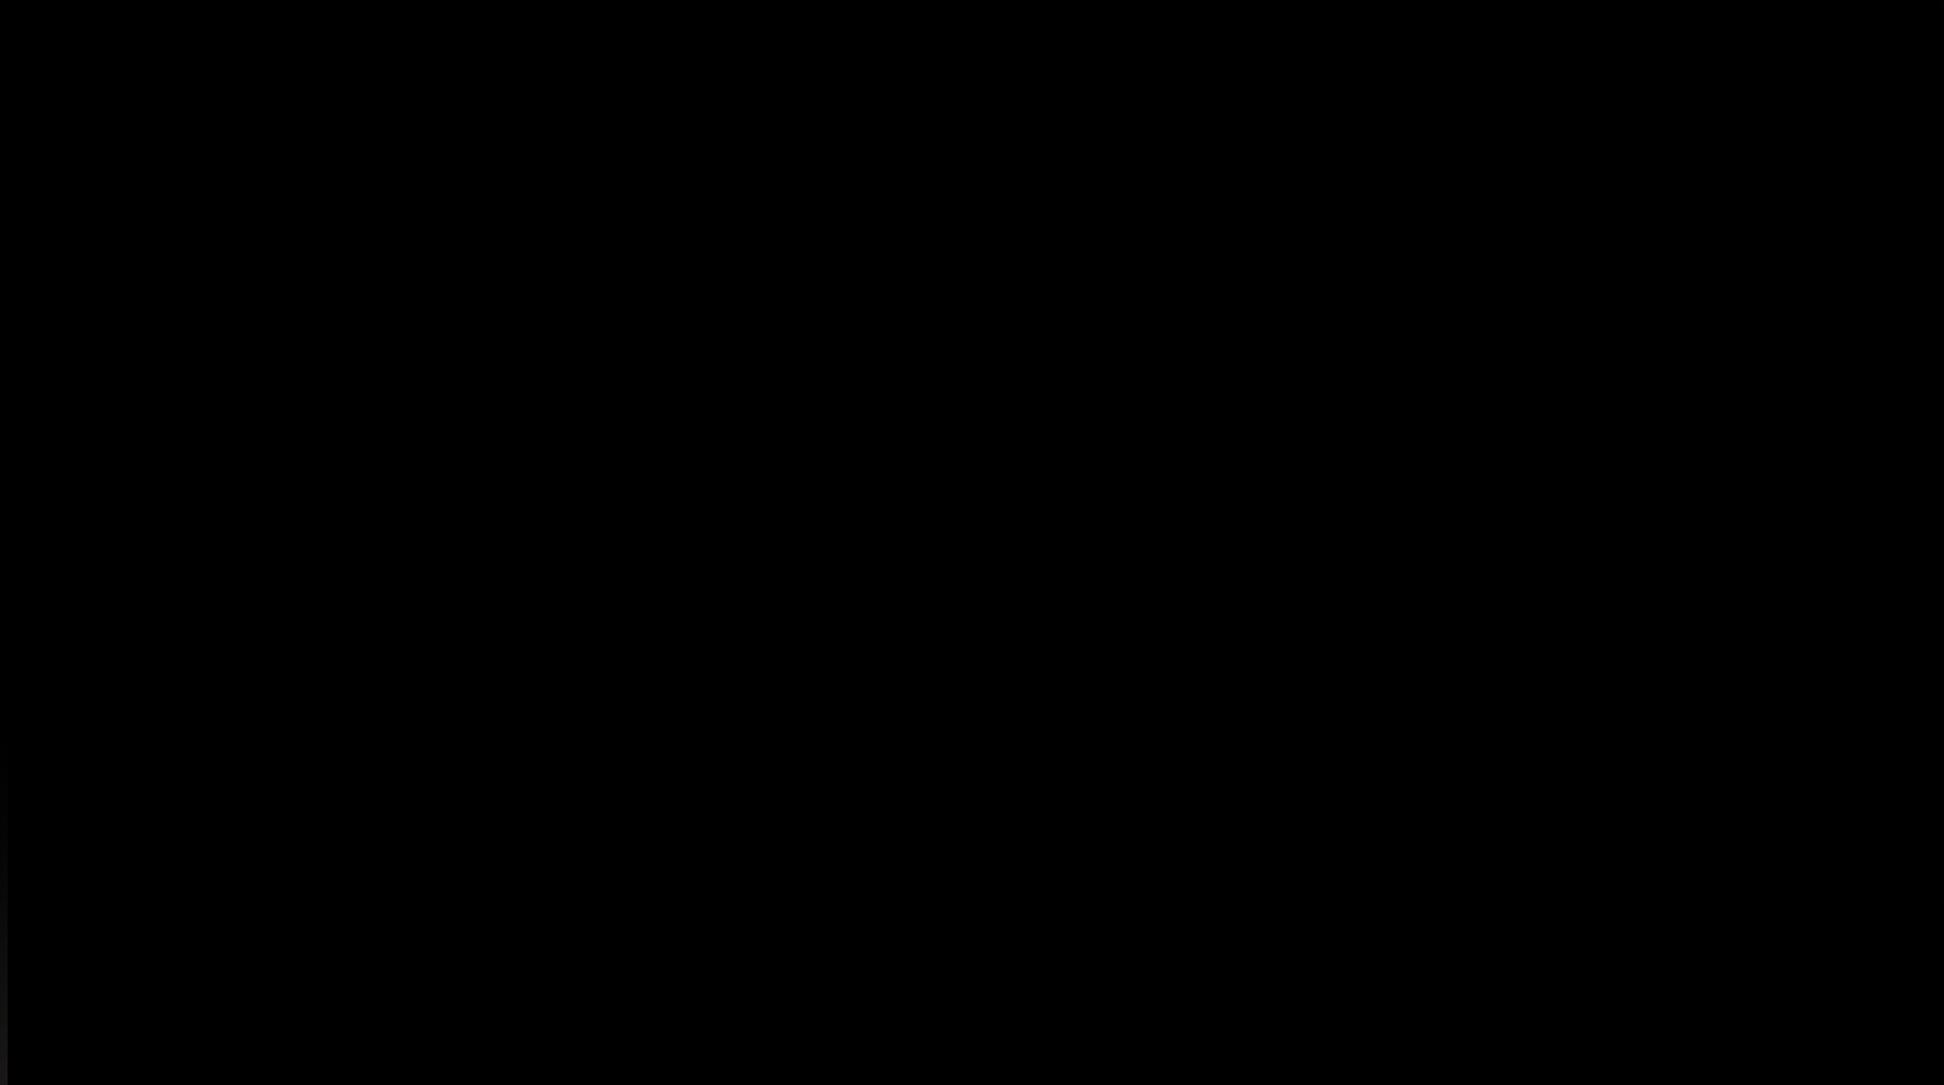

Access available  
24 hours a day / 7 days a week  
365 days a year

Manufactured in house in North Yorkshire

Our Smart Stores can be built to run on the SSS RFID platform or Smart Asset Solutions Stock Management System

# Our Services – Smart Storage Solutions

# The integrated view estates teams need

Smart Asset Solutions brings together:

- Asset intelligence
- Stock management
- Compliance
- Sustainability

Into a single, joined-up approach that helps estates teams.

This isn't about adding complexity.

It's about giving estates teams the visibility they need to deliver more care, more sustainably, with the resources they already have.

So, while Smart Asset Solutions can be adopted service by service, its real strength comes from bringing those services together — giving estates teams a joined-up, intelligent view of the assets and infrastructure they rely on every day.

Thank you

## NHS Deep Dive

**Carolyn Botfield**  
Director of System Improvement & Infrastructure  
NHS North East London ICB

North East London

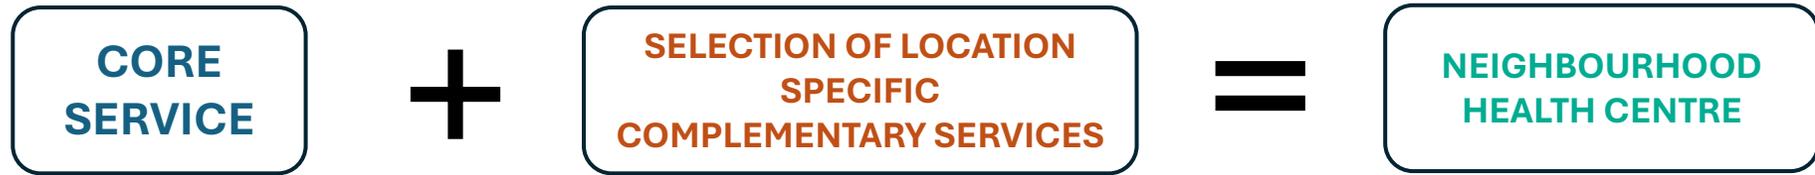

# Underused NHS and public estate can be repurposed into modern, sustainable, and digitally enabled facilities that support contemporary models of care

---

24 February 2025

Carolyn Botfield, Director of System Improvement & Infrastructure

# Core and complementary services for Neighbourhood Health Centres

## COMPLEMENTARY SERVICES\*

VCFSE services	Community Diagnostics Services	Intermediate care (e.g. women's health hubs)	Urgent community response	SEND provision	CYP services
Electives and outpatient services	Core ASC services (e.g. respite care, reablement, carers support)	Children's social care (e.g. family hubs)	Public health services (e.g. health visiting, drug + alcohol services)	Wider LA commissioned services (e.g. housing/debt support)	
Pharmacy	Wider primary care services (e.g. audiology, dentistry)	Community health services	Vaccinations and screening	Mental health services	UEC

## CORE SERVICE

- access to GP services (in house GP services or access to other GP services)
- Operates as a base for integrated neighbourhood teams

**WHAT MAY FALL OUTSIDE OF NEIGHBOURHOOD HEALTH (INDICATIVE)**

- Specialist hospital care
- Overnight inpatient beds
- Some outpatient services

\*Complementary services list not exhaustive

Working slides for discussion not official policy

# Neighbourhood Health Centre Archetypes

## Hub and spoke, refurb, extension, repurposing

- The hub needs flexible consulting rooms plus a proper treatment room, storage, utilities, and secure zoning for extended hours
- Spokes can be lighter footprint, with a small number of rooms and a navigation point embedded in local estate
- Primary care use the hub for same day assessment and procedures, and spokes for follow ups and local access

## Community or civic space repurposing

- High street space prioritises the front door, navigation, accessible consult rooms, and private rooms, with clinical grade ventilation and soundproofing
- Anything needing treatment room standards is delivered through booked sessions or a linked clinical site nearby
- Primary care can use space for book consults and triage review, and to pull in wider partners on site

## Cohort specific spaces

- A dedicated suite is designed around a defined offer, for example urgent minor illness, with the right kit, storage, and fast room turnaround
- The estate is optimised for throughput and clear boundaries, with signposted routes to other services
- Primary care can run focused sessions here or refer in, knowing what will be delivered and what will be escalated

## Purpose built neighbourhood health centres

- Purpose built design supports one stop flow, multiple consulting rooms, treatment space, group rooms, and back of house for equipment and logistics
- Co location and adjacencies make same day wraparound realistic, including pharmacy support and space for mental health input
- Primary care can resolve more in one visit, with fewer handoffs and better continuity

## Virtual neighbourhood health centres

- Estates requirement is smaller but smarter, a base for clinicians, video rooms, and booked clinic space, plus secure storage for kit
- Physical touchpoints are delivered through a network of local rooms, or home visiting, booked through one system
- Primary care can work remotely first, bringing people in only when examination or procedures are needed

# NHS North East London

The ICB, LA and 5 Trusts have been working in partnership at a NEL system level since 2017 on infrastructure planning.

Our 2024 NEL Infrastructure Strategy outlined 5 priorities which all planning and capital allocation are prioritised against.

We have recently opened three new award-winning facilities which embody the concept of neighbourhood health centres, alongside a programme of repurposing of existing estate.

*We will create a world-class infrastructure which supports and enables staff and patients to receive care that improves health and wellbeing outcomes and provides equity for all.*

**Goodman's Fields Health Centre, Tower Hamlets** – Building Better Healthcare Awards 2023 Best Healthcare Development (>£10m) - Gold

**Aberfeldy Village Health Centre, Tower Hamlets** – Building Better Healthcare Awards 2025 Best Interior Design Project - Gold

**St Georges Health & Wellbeing Hub, Havering** – Building Better Healthcare Awards 2025 Best Healthcare Development (£25m–£75m) - Bronze

# Health on the high street

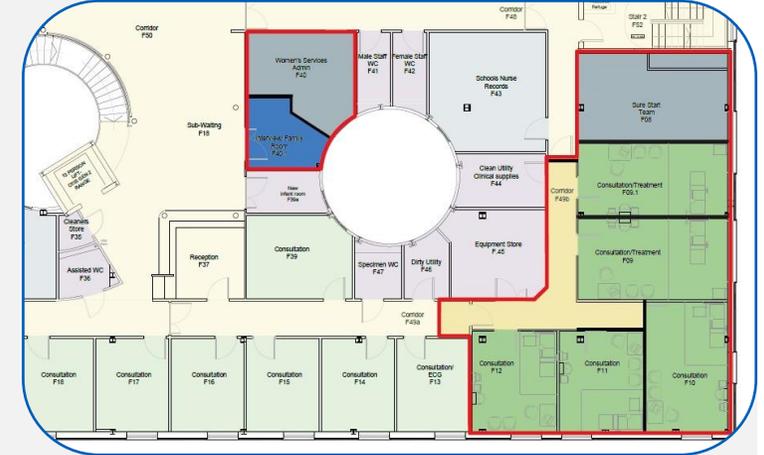

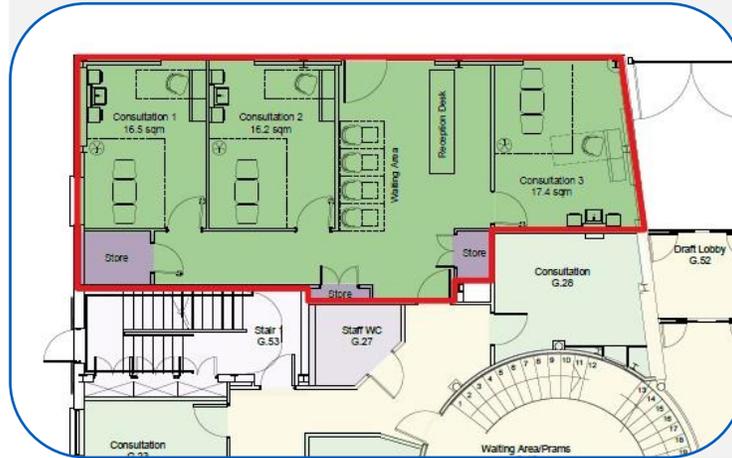

**Iford Exchange Health Centre** is a modern neighbourhood health centre embedded in the heart of Iford's high street, occupying two floors of the Exchange shopping centre. Designed as a one-stop, accessible hub, it brings NHS health, social care and community services closer to everyday life. The centre offers blood testing, podiatry, sexual health, mental health support, children's services and care for long-term conditions, alongside diagnostics and women's health. Its high-footfall location supports prevention, early intervention and integrated care, helping reduce inequalities and strengthen community wellbeing

*Creating an integrated neighbourhood health centre on the high street and securing value for money for the public purse*

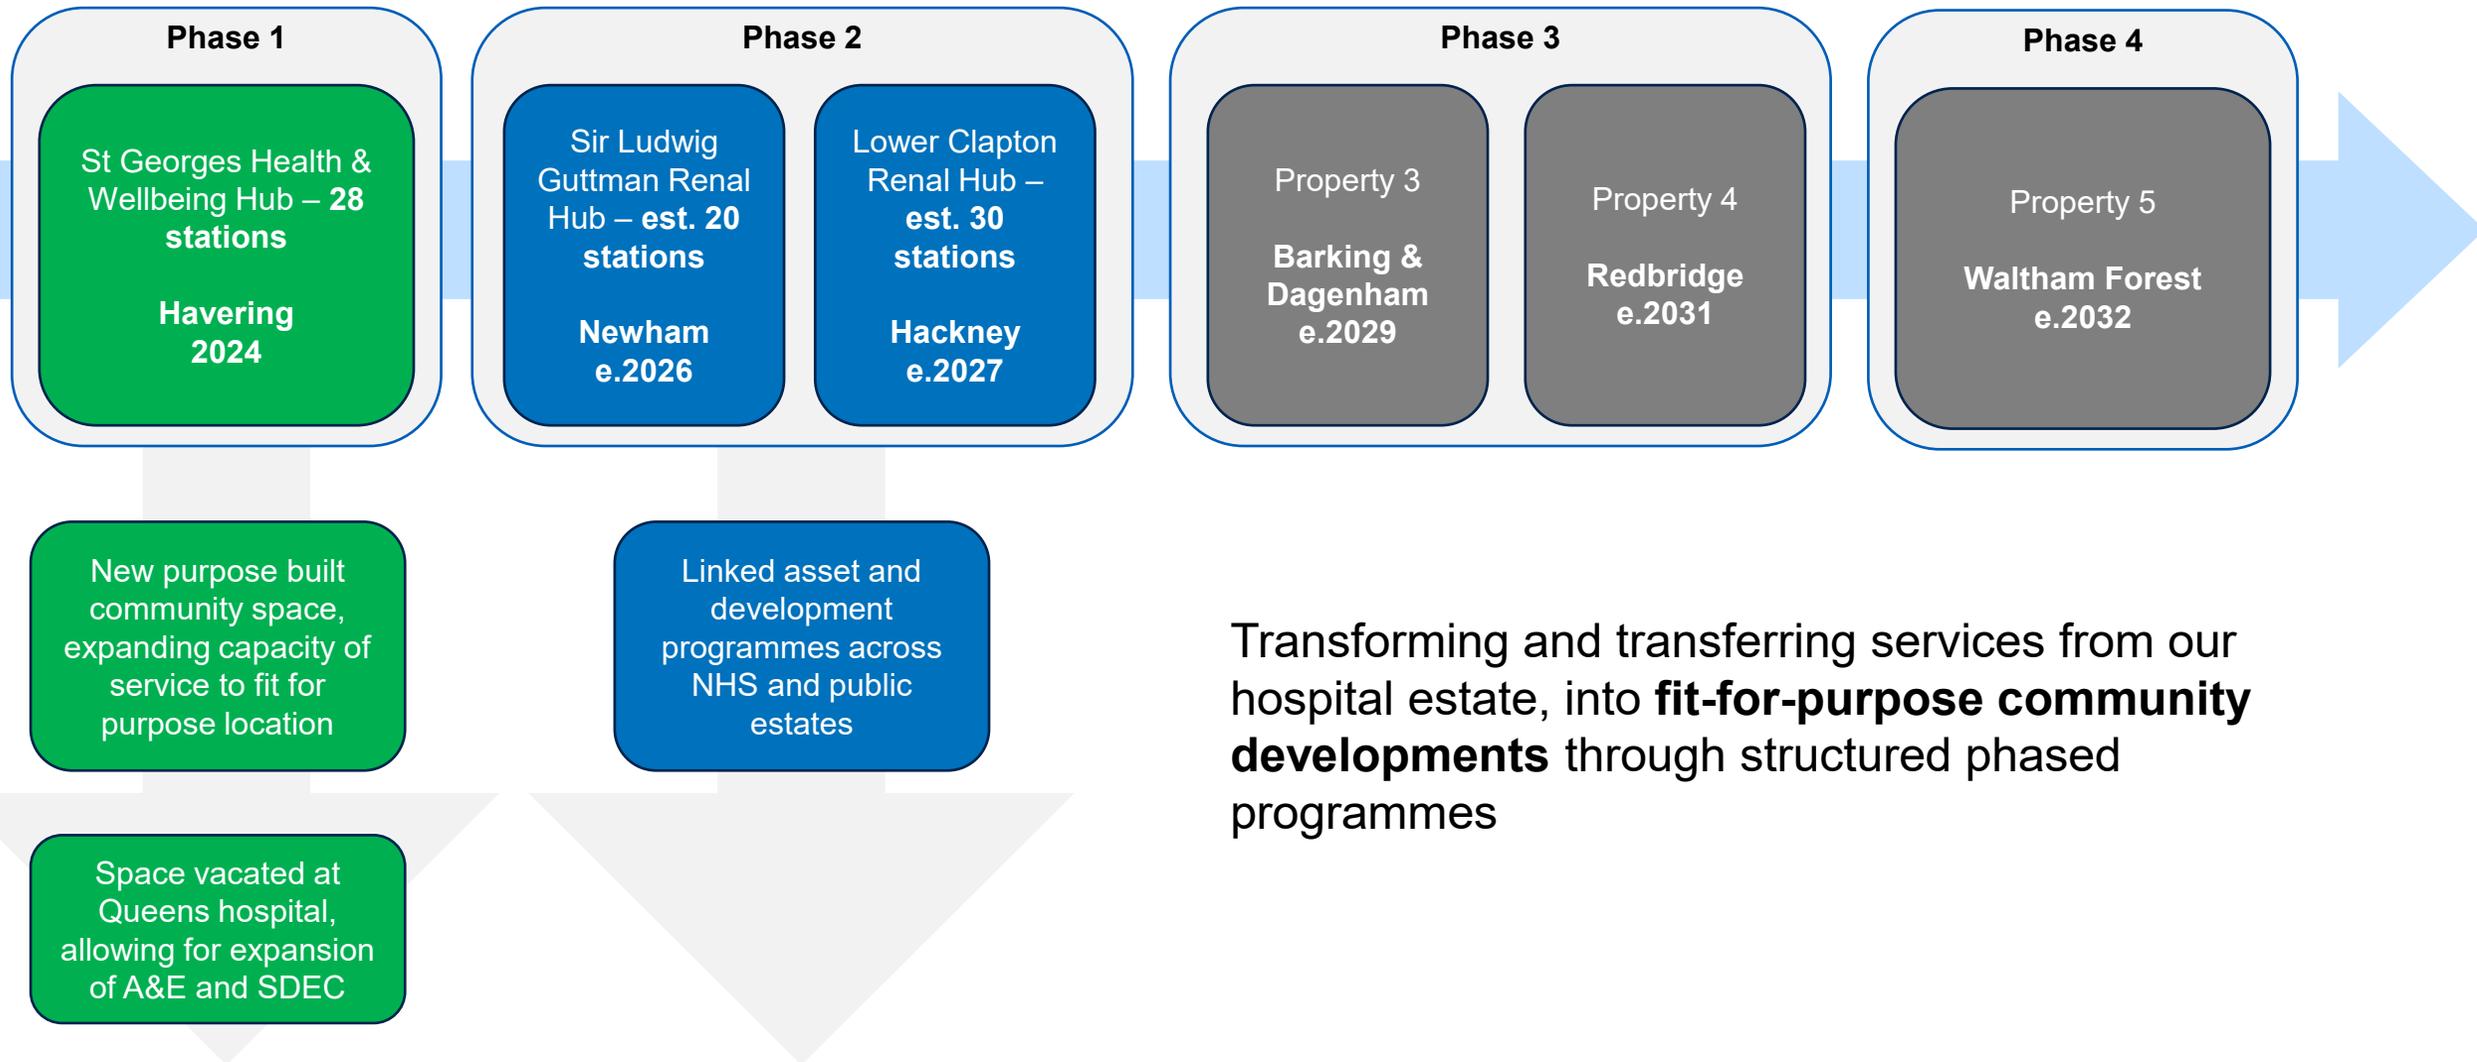

# PFI end of term planning

**Centre Manor Park Health Centre** is the first Community Health Partnerships (CHP) property in the country to reach PFI expiry in 2029. We are refreshing the model by re-aligning services and making better use of existing estate. The service strategy seeks to repurpose under-utilised, void and grey space to support more integrated, community-based care, shifting activity closer to residents. This includes reconfiguring non-clinical space, enabling flexible multi-use accommodation, and creating capacity for prevention, diagnostics and neighbourhood teams – expanding current services alongside creating a dedicated community ‘Sunrise Hub’ for children and young people who have suffered sexual abuse. The transition of this service into the community will also enable the development of the BCYP neighbourhood service.

*Reimagining ageing CHP estate as part of PFI end of term planning and PACE to create up to date neighbourhood health centres for residents*

# Renal dialysis community programme

# Thank You

North East London Health and Care Partnership is our integrated care system, which brings together NHS organisations, local authorities, community organisations and local people to ensure our residents can live healthier, happier lives.
